

# Welcome

Welcome to Issue 147 and your monthly roundup from across the UK.

I mentioned last month as to how nice the weather was, and it still is quite reasonable for the time of year. Looking back at previous editions of the magazine we have had some snow at the beginning of December in quite a few recent years.

Moving on and after the release of Class 91 119 in Intercity livery I was surprised not to see my inbox full of photos of it. Perhaps it is not as popular as I thought.

Interesting news this month that the long awaited TransPennine Express's fleet of CAF Nova 3 push-pull coaches is now expected to enter service later than planned in spring 2019. CAF had recently made it aware of a 'technical issue with a key on-board system' on the Mark 5A coaches, and was 'working hard to ensure this is addressed as soon as possible prior to delivery of the trains'.

Also news this month that the introduction of LNER's Azuma fleet would be delayed even further, the Class 230 Vivarail project is delayed introducing these trains from Bedford - Bletchley, and the woes of Hull Trains continues with the latest rumour that the 'borrowing' of a GWR HST might not happen due to there being nowhere to empty/fill the toilets....

Some appalling scenes from across the network this month as crowds try to get home after Christmas shopping trips to many of our towns and cities. I just can't believe that we treat passengers like 'cattle' and the ongoing dispute with Northern has certainly not helped. East Midlands Trains however did a fantastic job once again putting on extra services for the Lincoln Christmas market. But fundamentally does no-one realize that on the run up to Christmas people are going to go shopping and additional services are needed. All they are doing is forcing more and more people off trains and onto the already bursting roads

It would be remiss of me not to at this point wish all our readers and contributors a very Merry Christmas and a Happy New Year.

Finally, don't forget it's not all about the magazine, you can also find us on Facebook, Twitter and a whole host of other online media outlets. Don't forget to visit and if you haven't before, contributions are always welcome.

All the best for the month ahead and please do keep sending in those photos.

**Andy Patten**

## DB Cargo

Class 90 040 and 90 018 pass through Charnock Richard on November 14th hauling the 4M25 Mossend - Daventry intermodal. *John Sloane*

## Centenary Armistice Day Locomotive Naming

To commemorate the 100th anniversary of the end of World War I, DB Cargo UK held an official locomotive naming ceremony in Derbyshire.

On Friday 9th November staff and guests gathered at Midland Railway, Butterley to witness a Class 66 locomotive being officially named "Armistice 100 1918-2018".

The aim of the event was to recognise all those who have served in the Armed Forces over the past 100 years and during the event the Last Post was played.

The event was the brainchild of a DB staff member, Andy Hogan from Tees, whose great grandfather was killed in action in 1915 and is buried in Bailleul in Northern France. Through the staff suggestions scheme, he suggested it would be very fitting for an Anglo-German company such as DB to mark this special anniversary.

DB Cargo UK has for years employed members of staff who have served in Her Majesty's Armed Forces

## DB Cargo

▶ Class 66 020 hauls a couple of wagons past Cockwood Harbour, heading for Exeter Riverside Yard. *Phil Martin*

▶ On November 22nd, Class 67 005 'Queens Messenger' passes Knottingley on driver training duties as 0D07 Doncaster - Doncaster via Leeds. *Michael Lynam*

▶ Another former Virgin loco, Class 86 251 sits next to long term resident Class 90 050 in the yard at Basford Hall. *Brian Battersby*

## Freightliner

▶ Class 86 628 and 86 605 pass through Acton Bridge on November 13th heading towards Crewe. *Brian Battersby*

▶ Class 66 569 heads the 12:12 Lawley Street F.L.T. to London Gateway liner through Northampton on November 2nd. *Derek Elston*

▶ Class 66 571 approaches Lincoln on September 17th with a diverted Felixtowe - Leeds liner. *Paul Godding*

## Freightliner

On November 21st, Class 66 413 passes Smithy Bridge with a Redcar to Fiddlers Ferry power station loaded coal working. *David Wood*

## Centenary Armistice Day Locomotive Naming

On Monday 5 November, in the lead up to Armistice Day, Freightliner, a subsidiary of Genesee & Wyoming Inc. (G&W), named its recently re-liveried locomotive 66413 'Lest we forget' in recognition of The Royal British Legion's Thank You movement. The movement leads the nation in saying Thank You to the First World War generation who served, sacrificed and changed our world.

The loco naming ceremony took place at Freightliner's maritime terminal in Southampton and was attended by more than 50 guests; including the Mayor of Southampton, industry representatives and several ex-military colleagues from both Freightliner and sister company Pentaver.

Following a remembrance service, the name plate, which also features The Royal British Legion's Thank You logo, was unveiled by the winners of the staff loco naming competition.

"The Royal British Legion's Thank You movement provides a perfect opportunity to recognise and remember the crucial role the rail industry had to play during World War 1," said Adam Cunliffe, CCO of G&W's UK/Europe companies. "Trains transported troops, rations, coal, water, horses and artillery across Britain and Europe in a way never previously seen. Over 100,000 railway workers enlisted when the war broke out. By the end of the war, tragically 20,000 had lost their lives. We should never forget the ultimate sacrifice they made."

Catherine Davies, Head of Remembrance at The Royal British Legion, said, "We owe the World War 1 generation a huge debt of gratitude for helping to shape the world as we know it today. Not only the 1.2 million British and Commonwealth Armed Forces who lost their lives on the battlefield, but also those who kept the home front going.

Our 'Thank You' movement recognises all who played their part at home. We are grateful to those who ran the railway in the First

World War and who helped keep the country moving during such difficult times."

## Freightliner

▶ Class 66 413 passes Apsley near Whitchurch, hauling a Southampton - Trafford Park liner.  
*Michael Bennett*

▶ An increasingly rare scene ... 2 trains running round at Latchford sidings as Class 66 621 waits with a train of empty limestone hoppers heading for Fiddlers Ferry while 66 953 arrives on empty coal heading for York, November 30th.  
*Mark Enderby*

▶ On November 17th, Class 66 597 heads through Lincoln with a diverted Leeds - Felixtowe liner.  
*Richard Hargreaves*

# Freightliner

On November 18th, Class 66 546 passes through Scunthorpe working 0T02 IBT - Midland Road. Is that a tightrope spanning the tracks? It may appeal to the more intrepid of passengers!  
*Steve Thompson*

Class 66 511 arrives at Midland Road depot on a dull, damp and misty November 22nd.

▶ On November 10th, Class 67 022 hauls 91 119 through Lincoln with a diverted London Kings Cross - Leeds service. *Richard Hargreaves*

▶ IEP Class 800 201 rushes through Doncaster on November 13th working 5Q25 13:07 Peterborough to York test run. *Derek Elston*

▶ On November 20th, Class 90 039 departs Doncaster working a Leeds - London Kings Cross service. *Michael Lynam*

## Are you sitting comfortably? New research reveals the lengths Brits will go in order to bag a seat on the train

We all want a seat when we board a train, but if you don't have a reservation how do you bag the best spot onboard? We did some research to find out what your best seat finding tactics are...

### What we found out

Almost two-thirds (64%) of us deliberately linger near seated passengers just before the train pulls into a station. Over a third of us (39%) use the tactic of “kestrelling” (hovering over an apparently vacant seat to wait and see whether it's free). Thirty per cent regularly “coach patrol – walk up and down train carriages to search for an available seat – while 65% of us use the ping-pong tactic (frantically turn left and right to figure out which way to go to find a seat).

### The awkward seat moments

Almost half of us make sure we have a seat reservation to avoid run-ins with other passengers. If you're not a reserver you will relate to these awkward seat moments:

- Over a half (56%) have felt too awkward to ask another passenger to move out of their reserved seat or move bags off

seats.

- 36% per cent sat elsewhere because someone was sleeping in their reserved seat
- Nearly a quarter (24%) moved coaches following a 'seat altercation'
- Half of the nation (51%) would actually prefer to stand or look for an alternative seat than ask a passenger to vacate their reserved seat...

Donna Dawson, psychologist, says “Brits put a premium on good manners in public and don't want to become embroiled in any embarrassing scenes or come across to others as selfish and pushy. Developing 'seat strategies' is a way to avoid all of this, even if you have already booked your seat, and it is your personality type which will decide which strategies you employ!”

There has to be a better way to avoid those awkward seat-searching moments.

Introducing Seat Sensor, our new seat finding tech onboard Seat Sensor, a world-first innovation, is now live on all LNER trains displaying reservations above the seats using a traffic light system. The sensor records the current and future status of a seat's availability: green when a seat is unreserved for the whole journey; amber when a seat is reserved for part of the journey (you can check the screen above the seat to check which parts of the journey the seat is reserved for before taking a seat); and a red light when a seat is reserved for the whole journey.

Sounds great doesn't it? The best bit is that you don't need to walk through the train to find a green or amber seat. Instead you can use the seat finder tool from the onboard Wi-Fi pages to view a map of each coach and the seat status. Fingers crossed for a forward-facing window seat...

Class 800 107 rushes through Doncaster with a test working from Leeds, the 5Q32 11:45 to London Kings Cross on November 13th.  
*Derek Elston*

On November 2nd, hired-in Class 20 205 and 20 007 are seen working the 3S13 Wrenthorpe - Pasture St. RHTT through Althorpe. Inset: 20 007 leads 20 205 with the 3S14 Pasture St - Bridlington return working through Scunthorpe. *Steve Thompson*

*Derek Elston*

## Virgin Trains

Class 221 115 leads another Class 221 south through Acton Bridge November 13th, heading to London Euston. *Brian Battersby*

## Virgin Trains boosts services to Manchester for festive period

Virgin Trains has increased its weekend services from Macclesfield to Manchester for customers wanting to enjoy the city's festivities in the run up to Christmas.

Every Saturday until Christmas selected departures from London Euston will call additionally at Macclesfield – an increase of nearly 50%.

On a typical Saturday, Virgin Trains operates 14 services from Macclesfield to Manchester Piccadilly, which equates to one train per hour. The additional services will benefit Macclesfield with two services per hour between 11am and 5pm, offering those wanting to experience the Markets or do some Christmas shopping more options on Virgin Trains for their journey to Manchester.

Virgin Trains are now fully gearing up for Christmas with the recent launch of their Turkey and Bacon Sandwich and Festive Hummus and Pomegranate salad wrap in the onboard shop, as well as making festive film, *It's A Wonderful Life*, available on BEAM – Virgin's onboard entertainment portal.

Gaynor Stewart, General Manager at Virgin Trains, said: "Manchester is a very popular destination on our route and each year more people are making the journey to the city to get into the festive spirit. At Macclesfield our team recognised the opportunity for additional services and we're pleased to be delivering these by serving the town more frequently in the lead up to Christmas, offering a better experience for people making the short train ride to enjoy festivities in Manchester."

Sheona Southern, Managing Director at Marketing Manchester, said: "Manchester is an incredibly popular Christmas destination and continues to attract an increasing number of visitors every year with the biggest Christmas Markets in the UK. Excellent transport links make Manchester a great place to visit for a day trip or weekend break, and it is fantastic to see Virgin Trains operating extra services from Macclesfield, allowing more people from across Greater Manchester and beyond the opportunity to come and explore the city and its wonderful festive events."

Fares for journeys between Macclesfield and Manchester with Virgin Trains start from £7.60 for an Off-Peak day return.

## Businesses set to benefit from Virgin Trains and Eurostar collaboration

Businesses are set to benefit from a new collaboration between Virgin Trains and Eurostar which creates an end to end rail booking service between major routes and mainland Europe. In the first partnership of its kind between Eurostar and a UK train operating company, the initiative offers a “one-stop shop” service targeting the Meetings, Incentives, Conferencing and Exhibitions (MICE) market, removing the logistics of having to book separate journeys. This will enable customers to book a through-fare with Virgin or Eurostar from destinations such as Manchester, Liverpool and Birmingham to Paris, Lille and Brussels. The service also gives organisations and planners the ability to change or transfer tickets between delegates and to book out entire train carriages for events at discounted travel rates.

Groups can choose from Standard or First Class exclusive carriages or a combination of both, including personal branding as well as a variety of catering options.

VIP hosts will guide customers to and from St Pancras on the Virgin Trains leg of the journey.

Customers can now book the entire trip directly through either the Virgin Trains Red Carpet team or Eurostar’s groups team.

There is also an option to book a variety of unique experiences on board Eurostar, tailored for the event or destination, with activities including cheese and wine tasting, discovering artesian history and art classes.

The partnership has already been positively welcomed by European business travellers in Barcelona as it was officially unveiled on November 27th at IBTM World exhibition, with Visit Britain encouraging the overseas market to take advantage of the service.

Head of Offline Channels for Virgin Trains, Adrienne Nankivell, said: “This partnership provides the ideal solution for the business traveller searching for the best way to travel between destinations in the United Kingdom and mainland Europe. By creating a “one-stop shop” booking service we are able to offer a convenient way to travel for large groups who want an excellent customer experience. We are very much looking forward to developing this service for those intending on visiting Europe or the UK for business.”

Head of Sales, Simon Tyler, at Eurostar, said: “We are pleased to extend our MICE offer working with Virgin trains to make it even easier for groups to discover a wider range of destinations. Our dedicated MICE experiences have proved popular since they launched this summer, with passengers able to relax and enjoy tailored activities in their exclusive Eurostar carriage. We look forward to launching this partnership and offering even more MICE travellers a journey to remember.”

Visit Britain’s Head of Business Events Kerrin MacPhie said: “We are excited to be part of a collaboration to drive growth to more destinations across the UK for the international MICE market, giving event planners and their delegates the chance to easily explore our wider business events offer.

“This new booking experience provides convenience for the MICE market, easing the planning process and encouraging more international meetings to take place right across our nations and regions. Travelling is part of the meeting experience and by offering seamless transport options it positions the UK another step closer to being the leading destination for international MICE events.”

Reliveried Virgin Pendolino Class 390039 passes south through Acton Bridge on November 13th with a London Euston bound service.  
*Brian Battersby*

## Virgin Trains

### Inspirational quotes on station platforms prove a hit with passengers

A Virgin Trains employee has been motivating passengers at Crewe Station with a selection of self-penned motivational messages. The inspirational quotes are regularly shared by Virgin Trains Welcome Host, Aaron Koduah, on the notice boards at the station – which has become popular with passengers. He has now published a book, entitled ‘Developing a Strong Mindset: 500 Motivational Quotes That Are Designed To Help You Through Bad Times’ which is on sale at Amazon.

He joined the Virgin Trains team in 2015 and began sharing his own words-of-wisdom and some more famous quotes on the notice boards at Crewe station in January 2016. They were an instant hit with passengers on the route. Previously Aaron, 38, served in the British Army for seven years with the Royal Logistics Corp with tours in Afghanistan and parts of Europe after moving to the UK from Ghana. During his time in the army Aaron sought comfort and drew strength from words of wisdom.

He explained: “I’ve always loved a good quote and would often search online for motivational quotes to help me get through darker times. I began writing down my own quotes which I shared with friends and family on social media and eventually on the boards at the station.”

Customers began to photograph and tweet the notice boards, thanking Aaron for brightening their days. “I was really chuffed when I began receiving positive feedback from people and felt proud that my own words were now helping others through their bad times,” he said. “The reactions from customers has been overwhelmingly positive. The idea for the book actually came from people asking me where I get my ideas from and if I could compile them for future reference.”

Now the book has been published, customers are getting their copies signed at the station by Aaron. “If I can help just one person to develop a stronger mindset, my goal is achieved,” he said.

Aaron’s inspirational quotes: “It’s ironic how people accept, love and appreciate the beauty of different colours in nature but refuse to accept the diversities within their own human race.”  
 “Everybody hopes things will get better, but what they forget is, the future doesn’t get better by hope. It gets better by plan and action.”  
 “When everything is going wrong and you feel like giving up, always remember that, there is someone going through worse and who would willingly rather walk in your shoes.”

Class 390 049 passes Standish on November 3rd with a Glasgow Central bound service.

▶ Vossloh/Stadler tram Class 399 203 departs Rotherham Parkgate with a service to Cathedral. *Michael Lynam*

▶ Siemens/Duewag tram No. 107 approaches Meadowhall South/Tinsley working a Meadowhall - Middlewood service. *Michael Lynam*

# Greater Anglia engineers win awards for improving train reliability

Greater Anglia has won two rail industry awards for the reliability of its trains in Norfolk, Suffolk and Essex. The train operator's engineering teams received 'Golden Spanners' for the Norwich – Ipswich – Colchester - London Intercity and Stansted Express services - which beat other train fleets in their class to clock up the most miles before developing faults that needed fixing.

As a result, Greater Anglia's Intercity fleet, with 58,323 miles between faults, is the most reliable in the UK. Its Class 379 trains which operate the Stansted Express service achieved 76,898 miles before developing faults that needed fixing. The awards are given based on independent industry-accredited statistics using the Rail Delivery Group's moving annual average data for the 12 months ending mid-October 2018.

Roger Ford, Industry & Technology Editor of the trade magazine Modern Railways which organises the Golden Spanner Awards commented, "For Greater Anglia to win Golden Spanners in the categories covering former British Rail trains and the latest electric trains is a tribute to the engineering teams at Crown Point and Ilford maintenance Depots.

"The team at Crown Point Depot has now won the ex-BR Intercity category three years in a row."

Jamie Burles, Greater Anglia's Managing Director, said: "I am delighted that the improvement in performance has been recognised at the Golden Spanners Awards and would like to congratulate our depot and fleet teams on their hard work which has had a big impact on train reliability, leading to better service for customers. This is even more impressive considering that it has been achieved during the major redevelopment of Norwich Crown Point Depot so that it can accommodate the longer new trains, which has meant a period of significant transition, upheaval and logistical issues for both Crown Point and Ilford depots in maintaining the existing fleet while this work is being carried out."

"We are replacing every single train with brand new trains from 2019, but until then we will continue to make our existing trains as reliable as possible, which is why we have invested over £23 million in reliability improvements to provide the consistent and improving levels of train service performance that our customers expect."

The Golden Spanners awards – in which the trophies feature that archetypal element of train maintenance, a spanner – celebrate the best of rolling stock maintenance and are handed out to train companies who make the greatest strides in train reliability.

## Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

### Retailers are being forced to sell impossible itineraries, due to incorrect GTR timetable data

Q: On Saturdays in January, the line would appear to be closed between Hitchin and Peterborough to some degree, meaning that LNER are diverting via Cambridge and Ely.

While their revised timings are in the system, GN's are not, and the standard WTT is currently all that's in there.

Tickets for the first Saturday, 05/01, are now out. Hence, the LNER website is suggesting that passengers wanting to leave London as late as possible catch a 20:16 GN service to Peterborough from London, overtake the diverted 19:46 to Newcastle, and connect at Peterborough. Not only that, but they're actually selling AP tickets with this suggestion. Logic would suggest that GN likely aren't going to be running through via Huntingdon if LNER aren't. Anyone rocking up at King's Cross with tickets for this route towards York, Northallerton, Darlington, Durham and Newcastle is going to find themselves in a right old mess.

They can also book the direct trains, but at xx16 every hour, the 'overtake' option is offered. Some serious disjointed planning going on here?

A: The plan has changed several times but during some of the work GTR are running through while LNER terminate short.

Logic doesn't come into it. If GTR have uploaded these trains into the timetable data feed then tickets must be sold against them. It would be remiss of LNER not to sell valid tickets in accordance with the timetable and fares data over their website.

If they're known not to be going to run, GTR shouldn't have uploaded them. If they're cancelled or amended between

now and the date of travel in a way that causes delays, GTR may need to pay Delay Repay or arrange alternative transport.

From experience I've never known GTR to run through while LNER are sent on a much longer trundle, but if this is the case then good on LNER for giving a same priced option to travel later. Grand Central are however also down as still running an 1818 to Sunderland as usual via Huntingdon, I wonder whether same applies?

It also revealed yet another bug in the website. The "Go Faster" option said I could save 702 minutes - even though my selected trains only totalled 404 minutes. Strangely, trying it again just now, it will only save me 672 minutes. Either way, it looks like time travel is possible with LNER, so the new name really is appropriate ;)

If this train is retimed or cancelled this does not invalidate the fact the train companies are contracted to convey the customer at those times. GTR would be liable for the cost of any taxis and/or overnight accommodation, along with Delay Repay, if the passenger turns up at the contracted time and finds there is no train running at that time. The itinerary provided at the time of booking is evidence of a contract. Some train companies have been known to erroneously blame retailers which is absolute nonsense. The timetable data is set by the TOC operating the train, in this case GTR. If single line working is in place it's very possible GTR will be the only operator using the line, while LNER run their diesel trains via Cambridge, so the data cannot be assumed to be incorrect.

### Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

## Greater Anglia installs new signage to improve rural stations

New signs have been installed at rail stations in Suffolk to help improve their appearance and promote the local area.

Working with the Wherry Lines and East Suffolk Lines Community Rail Partnerships, new signage has been installed by Greater Anglia at Lowestoft, Oulton Broad North, Oulton Broad South, Saxmundham and Wickham Market stations.

Greater Anglia's Community Partnerships Manager, Paul Haynes, said, "We are pleased to have worked with our local Community Rail Partnerships to upgrade signage at several stations in Suffolk, where the existing signs were looking a bit tired and in need of replacement. It's all part of a wider programme to promote and market travel with the help of community rail partnerships, by improving stations and service standards in advance of the major benefits that new trains will bring over the next couple of years. The new signs will create a much smarter welcome at these stations, adding to other recent improvements such as our installation of ticket vending machines with new help point facilities. Greater Anglia is committed to upgrading stations across the network to make customers' journeys better."

Martin Halliday, Community Rail Partnership Officer, said, "As work progresses at Lowestoft, we're delighted that the station was chosen as the first in the region to receive the new station signage, complementing the works to convert the redundant station parcels office into a new public exhibition space, its recently painted heritage colour scheme and the installation of vintage-style concourse lighting. With new signage at some other East Suffolk line stations too, complimenting other upgrades, we're seeing real improvements at stations on local lines in Suffolk and Norfolk."

# Loco Fleet List Ten

This publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

### Features:

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric & Bi-Mode Locos
- Eurotunnel Locomotives
- Unclassified Locomotives

Loco Fleet List Ten is available via mail order for just £12.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or using Paypal when visiting the Loco Fleet Shop website.

Web: [www.locofleetshop.co.uk](http://www.locofleetshop.co.uk) Email: [lee@locofleetshop.co.uk](mailto:lee@locofleetshop.co.uk)

This special anniversary edition has undergone a complete rewrite to include scrappage dates, locations and allocations of all preserved and operational locomotives now in a perfect bound book

Newly restored back to operating condition on the Keighley and Worth Valley Railway, 2MT No.78022's first day on revenue-earning trains saw it in charge of services during the Haworth Steampunk Weekend. The loco is seen arriving at Haworth in the early afternoon with a train for Oxenhope, November 24th. *Ben Bucki*

## First of Greater Anglia's new trains now in East Anglia

The first of Greater Anglia's brand new Swiss trains has now arrived in East Anglia. The four-carriage bi-mode train, which will ultimately run on regional lines across the Greater Anglia network arrived in late November. It was pulled to Norwich by a locomotive and will now undergo a programme of testing around the network before it is passed as ready to go into service.

Ian McConnell, Greater Anglia Franchising and Programmes Director said: "It's so exciting to see one of our new trains here in East Anglia. I'm sure people will be impressed when they see it – it is very different to our existing trains. People will be able to see for themselves that we really are transforming the railway in East Anglia. Over the next few weeks, we'll be taking delivery of more of these trains so customers will see them around and about our stations. I'm afraid they're not in service yet – we need to carry out lots of tests to make sure they complete all of our standards for safety and performance before passengers can use them."

Technicians have already carried out a number of tests on the train in Europe including testing brakes,

pantographs, noise levels, emissions, operational safety, automatic train protection systems and testing on special curved tracks against derailment.

Now the train has to be tested on the Greater Anglia network to make sure it passes strict regulations for being safe to carry passengers in the UK.

Over the next few months, a number of tests will take place, including testing the train's pantograph (the equipment which connects the train to the overhead wire to get power), passenger information system and automatic selective door opening – for when the train is longer than a station platform.

After a period of classroom-based training, which will include sessions on new multi-million pound simulators, Greater Anglia's drivers will then be undertaking test runs using the new trains on routes across Norfolk, Suffolk and Cambridgeshire.

Greater Anglia is getting 38 bi-mode trains – 24 four-carriage and 14 three-carriage trains - which switch from diesel to electric power - from Swiss train manufacturer Stadler.

They will run between Norwich and Cambridge, Sheringham, Lowestoft and Great Yarmouth; Ipswich and Cambridge, Lowestoft, Felixstowe and Peterborough; and Marks Tey and Sudbury. The company is getting ten Intercity and ten Stansted Express trains from Stadler. It is getting a further 111 electric trains from Bombardier, in Derby, to run on commuter routes into London Liverpool Street from Essex, Ipswich, Cambridgeshire and Hertfordshire.

All of the trains will have plug and USB sockets, fast free wifi, air conditioning, accessible toilets, wheelchair spaces and bicycle spaces. They should all be in service by the end of 2020.

Ralf Warwel, UK sales director at Stadler, said:

"The arrival of the first Greater Anglia train on British soil is a highly symbolic moment, both for the project and for the Stadler business. We've made no secret of the fact that we are keen to make headway in the UK market. This order placed two years ago was our first major contract for passenger trains, paving the way for subsequent orders with Strathclyde Partnership for Transport, Merseytravel, and most recently, for Wales & Borders. These new trains, all of which are FLIRTs, one of Stadler's most popular and versatile products. They rely on state-of-the-art, environmentally-friendly technology and feature low floor and level boarding, vastly improving the customer experience. We are delighted to have reached this significant point in the project, which brings the trains one step closer to passenger roll-out next year."

The new Stadler trains are financed by Rock Rail East Anglia, a joint venture between Rock Rail, Aberdeen Standard Investments and GLIL Infrastructure and will be leased to Greater Anglia.

The new Bombardier trains are financed by Angel Trains.

Class 315 845 and 315 846 being dragged through Northampton on their last trip to the breakers behind Class 37 800 'Cassiopeia' as 5Q66, the 05:22 Ilford EMU Depot to Kingsbury sidings on November 2nd. *Derek Elston*

# GTR and The Prince's Trust help eight disadvantaged young people find work on the railways

Govia Thameslink Railway (GTR) has offered eight young people jobs with Thameslink and Southern Rail, after they graduated on Monday from a four-week work experience programme run in partnership with The Prince's Trust. The scheme — 'Get into Railways' — gives young people aged 18-25, who are struggling to get into employment, vital learning and skills needed to help them find work on the railway. Many have never been given such an opportunity, so the programme becomes much more than a job, it becomes a family and support system. The eight individuals will start their new roles across the GTR network in the coming weeks, with four joining Thameslink and another four joining Southern Rail. They will also have access to a network of GTR progression mentors who support the young people as they begin their new roles. The programme sees a team of 100 GTR staff members orchestrate three intakes per year, often creating specific roles for participants following their graduation. To date, well over 100 young people have been given the chance at having a career in the industry as a result of the seven-year partnership.

During the four-week course, candidates are taught about and experience many aspects of a career on the railway. The first two weeks are spent in a classroom learning presentation skills, crisis management, first aid, security protocols, and customer service skills that are all vital when working at stations. The other half takes place on the network, working with staff to gain practical work experience in roles such as gateline staff or customer service.

The graduates offered roles with GTR include:

Baski Gwen, 19, from Kenley, Croydon, who has been offered a position with Southern Rail, said: "The programme has given me a lot more confidence and improved my skills - some of which I didn't even know I had before! There wasn't a single day on my placement that I didn't want to go in and do the job at hand. Every day I've been so motivated to do my best and it's been a great experience that I've loved from start to finish."

Bianca Bhebhe, 18, from Bedford, who has been offered a position with Thameslink, said: "Being part of The Prince's Trust programme has been life changing and really helped me to focus on what I want to achieve. From here I just want to progress even further and one day I'd like to become a train driver, and even work my way up to management."

Cynthia Bosombi-Mandete, 26, from Barnet, who has been offered a position with Southern Rail, said: "This whole experience has been amazing and taught me so much. I'm a full time mum of two and I think us mums can sometimes put ourselves in boxes where we don't feel we can grow, but now I know I can excel. Being part of the scheme has given me the determination to have a successful career, for myself, my kids and for the other mums out there."

Paula Hillard, Engagement Manager at Govia Thameslink Railway and co-ordinator of the scheme, commented: "At GTR, we believe that everyone should have the chance to embark on a stable and rewarding career. Today, far too many young people are struggling to find work and, as a result, they're giving up hope for the future. Working with The Prince's Trust allows us to provide these young people with this opportunity — helping them to build their skills, confidence and motivation to enter employment on the railway. We share many of the same values with The Prince's Trust when it comes to training up the next generation. And as our partnership with them continues, we look forward to providing more young people with the chance join our GTR family. I want to thank everyone involved in this most recent programme and wish our most recent graduates every success in the future."

Andy Bindon, HR Director of Govia Thameslink Railway, said: "Working with The Prince's Trust and seeing these young people flourish is always the highlight of the year for me. The young people who take part in this programme are an inspiration to all, with an infectious desire to make a career for themselves. I want to congratulate all who have been offered a permanent role and I look forward to welcoming them into the GTR family."

Janet Craven, who manages the programme at The Prince's Trust, added: "At The Prince's Trust, we work with the hardest-to-reach young people who deal with challenges that are negatively impacting their life. We know that most young people have the determination and willingness to find a job, but that they often lack the opportunities to do so. GTR's scheme is really leading the way when it comes to helping young people into things they never thought they'd do. It just shows what you can achieve when given the opportunity."

## Passenger's diamond wedding ring rescued by rail workers from being lost forever

When passenger Eileen Lawrence lost her wedding ring over the platform edge at Bloxwich North station early one morning she thought it was gone for good. That's until the Network Rail track team came to her rescue.

As Mrs Lawrence waited on the platform on a cold and dark November morning, for her usual 7.03am train to Birmingham New Street, she decided to moisturise her dry hands. So out came her hand cream, off came her diamond wedding ring, and in no time it vanished from sight. Slipping from her fingers, she heard the priceless piece of jewellery ping as it hit the busy station platform, then bounce out of sight onto the railway track below.

Eileen said: "Every day I stand by the same people waiting for my train and when they saw the commotion they couldn't believe that I'd dropped my wedding ring. People came rushing over to help – one lady even suggested using her umbrella as a hook to find it.

"But it was nowhere to be seen. I didn't have time to get really upset, because my fellow commuters were so supportive."

As soon as Eileen arrived at Birmingham New Street station, panicked she'd never see her diamond-studded wedding band again, she reported her mishap to staff and the hunt to find it began.

Efforts were made on the day at Bloxwich North to see where the ring had landed, but they were without luck and hope began to fade.

It was only when Network Rail's track section manager for Walsall, Phil Heeley, was alerted the next day, he was able to get his track technicians Adrian Callaghan and Matt

Hayes to meet Mrs Lawrence exactly where she last had her hands on her precious wedding ring.

Phil said: "In all my 40 years' service I have never had a request like this one. I told Matt he would have to stop the movement of trains with a 'line block' before going on to the track, and if the wedding ring wasn't visible he'd have to move the ballast stone by stone. I even considered trying to get a metal detector if that didn't work.

"But almost as soon as Matt and Ade went down onto the track, luckily the wedding ring was sat there, pointing up towards the sky. I know how precious a wedding ring is and I really felt as if Network Rail had done a really good deed. I know that on that day there was one lady who was a very happy customer."

Eileen added: "I felt completely overwhelmed when my ring was finally found. When you hear about Network Rail in the news it's often negative, so I really wanted to share my story about the lengths its staff went to reunite me with my wedding ring.

"I am really grateful for the team at Network rail who acted so promptly, and to the two men Adrian and Matt and their boss Phil who helped retrieve it from the track. It can only be described as splendid customer service which reached far beyond my expectations."

It was only after the ring was safely back in its rightful position that Eileen plucked up the courage to tell her husband of 31 years all about its unexpected overnight stay on the tracks.

Mrs Lawrence also says that she's very much learned her lesson; now she's vowed to never take it off - or moisturise her hands on her early morning commute again.

# East Sussex passengers advised to plan ahead as railway closes for four days

East Sussex passengers are advised to plan ahead as work to complete a major upgrade of the line between Lewes and Seaford means buses will replace trains on all routes via Lewes – including those to and from Haywards Heath – for four days in March 2019.

Network Rail engineers will be working around the clock to complete the final phase of work on a project to upgrade the old signalling system on the line between Lewes and Seaford with modern, more reliable technology to reduce delays for passengers.

The final commissioning, when the current system will be disconnected and the new system switched on, can only be carried out with a closure of the railway in the Lewes area. Services between Brighton and London are not affected but there will be no trains west of Eastbourne via Lewes as far as Brighton, Seaford and Haywards Heath from Thursday, 7 March to Sunday, 10 March 2019.

A rail replacement bus service will operate throughout the affected area to keep passengers moving during the four days.

Paul Harwood, Network Rail director of investment, South East, said: “This is a much-needed upgrade to some of the oldest signalling in the country, with new state-of-the-art equipment providing passengers with more reliable journeys for many years to come.

“I’d like to thank people for their patience while we complete the upgrade in March. There is never a good time to close the railway and the alternatives would’ve meant impacting services over the Easter or May bank holiday weekends. Following our recent discussions with local stakeholders we know this would’ve been unacceptable to the leisure and tourism industry here on the south coast.

“We’re working closely with our colleagues at Southern to ensure people are fully aware of the closures and the alternative travel options available to them.”

Keith Jipps, Infrastructure Director for Southern’s parent company Govia Thameslink Railway, said: “This major investment will improve the reliability of signalling and therefore our services for passengers travelling on one of our key coastal routes. Working with Network Rail, we will publish detailed travel advice as soon as it is available.”

The upgrade will see signalling control of the Lewes, Newhaven and Seaford areas moved to Network Rail’s state-of-the-art route operating centre at Three Bridges, meaning that the signal boxes at Lewes, Newhaven Town and Newhaven Harbour will close.

The project will also increase the number of trains able to use the diversionary route for London–Brighton services via Lewes to three trains per hour, helping to keep passengers moving during planned and unplanned disruption.

A rail link for the new aggregates facility at Newhaven Marine will also be provided, helping to take hundreds of heavy goods vehicles off local roads.

# First electric train for Stirling-Dunblane-Alloa line

Network Rail achieved another key milestone on the Stirling-Dunblane-Alloa Electrification Project overnight with the first electric test train running on the route on November 28th. The train (a class 380) successfully completed test runs at line speed along the newly electrified lines to Dunblane and Alloa overnight on Tuesday into Wednesday.

Further test trains will run during the weeks ahead of the introduction of ScotRail electric passenger services on the line from December 9.

Over the last two years engineers have installed over 2,000 stanchions and structures supporting more than 300km of overhead wires along the 50km route.

Major modifications have also been carried out to bridges along the route to create enough space for the new overhead lines and accessibility is being improved for customers at Stirling with the installation of a new footbridge and lifts providing step-free access to all platforms.

Delivered on-time, the Scottish Government-funded project will enable:

- The introduction of class 385 electric trains which will offer a better travelling experience and reduce some journey times from Stirling to Glasgow and Edinburgh
- More seats on services between Alloa, Dunblane, Bridge of Allan and Stirling to Glasgow and Edinburgh.
- A reduction of noise and better air quality for those who live and work near the railway.

Iain McFarlane, Network Rail's delivery director for the Stirling- Dunblane-Alloa project, said: "Successfully running this first test train brings the railway a step closer to being able to introduce electric services for customers.

"Electrification will transform travel across the central belt of Scotland – increasing the number of seats, reducing journey times and cutting emissions by introducing more modern and greener trains to the route."

*Brian Battersby*

# New railway technology - used for the first time in the UK - will give Network Rail more time to carry out vital maintenance work on the South Western Railway route

New technology being rolled out across the South Western Railway route is set to give track workers an extra 1,600 hours a year to carry out vital overnight maintenance and renewal work.

More than 450 of the devices required for this technology will be installed by March next year, with a further 400 to be installed over the coming three years.

The extra hours – equal to 66 days a year – will mean infrastructure on one of the busiest and most congested parts of the railway is more reliable, with fewer delays for passengers.

Known as ‘faster safer isolations’, the technology allows for a more efficient, safer way to turn off the power on the railway line. It brings an end to the outdated and laborious practice of ‘manual strapping’ which typically requires two people having to walk out onto the live railway line, carrying more than 30kg of kit.

The new approach requires one person to drive out to a local control panel, away from the live railway, and operate a series of switches.

Currently, around 2,500 work hours a year are spent doing manual strapping on this part of the railway.

Becky Lumlock, route managing director for Network Rail’s Wessex route, said: “The window of time where our track staff are able to work on the railway overnight is one of the shortest in Britain, with the last and first train times on a weekday night of typically 1:00am and 4:30am.

This incredible time saving technology will allow us to be more productive in this short window so we can carry out more vital maintenance work on our railway, giving our passengers more reliable journeys. It is also much safer for our workforce, keeping them off the live railway more of the time.”

Across the country, more than 20 members of Network Rail staff are injured each year when using the traditional manual strapping method to turn off the power. The new approach reduces the time staff come into contact with the live railway, so is much safer for our workforce.

The technology has been successfully trialled in the Guildford area and is now being rolled out across the network.

▶ The view of Scunthorpe station’s ‘new’ (temporary) footbridge. It opened on November 15th, having taken about three weeks to construct at goodness-knows-what cost, completely unnecessary in my view! As you can see, the view from the bridge is somewhat better than the view of it! *Steve Thompson*

▶ On November 18th, and there it was... gone! TransPennine Express Class 185 131 arrives at Scunthorpe on 1B72 Manchester - Cleethorpes, past a suddenly-vacant west end of the station. The old footbridge had literally disappeared overnight. *Steve Thompson*

# Passengers experience faster and more reliable journeys after £21 million Sevenoaks tunnel refurbishment

One of longest tunnels in southern England given biggest overhaul in 150 years  
Work results in a 20% reduction in delay incidents through the tunnel nearly halving journey times for passengers  
Drainage systems improved with track and sleepers replaced

Passengers are experiencing more reliable and faster journeys on one of the busiest routes in South East England as a two-year renewal of infrastructure on the two-mile long Sevenoaks tunnel nears completion. The tunnel has been given a £21million refurbishment which has included the replacement of thousands of sleepers, the laying of several miles of new track and the installation of new drainage systems. The completion of the main works has resulted in a reduction in delays for passengers of nearly 20% with journey times through the tunnel up to 64 seconds quicker due to the lifting of speed restrictions. The work on the 150 year-old tunnel began in 2017 and has included partially lining 13 ventilation shafts, measuring up to 120 metres deep below the Sevenoaks Weald, which has stopped water flooding the tracks below and causing delays. Engineers have also overhauled its electrical systems to make them more reliable and ensure that other lines in the area can operate if there is a power issue in the tunnel.

The work will improve reliability for Southeastern as well as Thameslink services, which are affected by knock-on delays and congestion when Southeastern's London services need to be diverted.

The team have employed several innovations during the project, including 3D modelling to prove the suitability of special padded sleepers for reducing stress to the Victorian structure and enabling faster train speeds, while safe access methods have allowed the tunnel to stay open during most of the works to the ventilation shafts, where previously line closures would have been required.

Journeys through the Sevenoaks tunnel are now smoother and faster now that the work has allowed speed restrictions to be removed with trains able to travel at up to 90mph instead of 50mph, nearly halving journey times through it.

John Halsall, Network Rail South East route managing director, said: "We're pleased to have delivered this project to upgrade one of the country's oldest and longest rail tunnels using the investment provided by Government through the Thameslink Resilience Programme. Delays due to flooding had become a regular occurrence through the Sevenoaks Tunnel but we've been able reduce delays by a fifth, giving passengers well-earned relief to their journeys, and I'd like to thank them for their patience while we've carried out this vital work."

Ellie Burrows, Southeastern's train services director, said: "We're very pleased that this major work on the Sevenoaks Tunnel has been carried out and will improve the reliability of services for our passengers. I'd like to thank passengers for their patience during the 15 weekend closures of the line which have been necessary to allow this work to be carried out."

Other improvement works have also been carried out locally to maximise the use of line closures including structural improvements to adjacent tunnels, ballast cleaning, repairing small areas of worn track in more than 36 locations and the replacement of 700 yards of sleepers suffering from 'concrete cancer' degradation outside the southern end of the tunnel.

The project has been a major element of a £300m government-funded programme to tackle delay hotspots and improve railway reliability for the new Thameslink timetable.

## The Nosh Report

### Vintage vans delight hungry customers at Cambridge railway station

Passengers at Cambridge station now have a choice of Kumpir, coffee and French hot dogs thanks to three new colourful food trucks.

A trio of colourful vintage vans are parked on station square outside the Old Ticket Office pub selling coffees, hot dogs and Turkish cuisine.

Coffeelink is based in a red van and sells coffee and snacks, Flavour Station operates from a black and gold van and sells freshly made Kumpir (Turkish jacket potatoes), sandwiches, salads and hot drinks, while Saucisse Mon Amour in the yellow van specialises in baguettes, French hot dogs and pulled meats.

Simone Bailey, Greater Anglia's Asset Management Director, said: "Cambridge is the busiest station on our network and the new food trucks are providing popular with customers throughout the day. We are very pleased to welcome Coffeelink, Flavour Station and Saucisse Mon Amour to Cambridge station, together they bring a great variety of food to the thousands of people who use the station every day. The three food trucks look very effective parked next to each other and help to brighten up the area."

Earlier this year a brand new pub and restaurant The Old Ticket Office, opened in station square.

Located in the old ticket office, visitors can enjoy the bright heritage railway colours, dining booths with seating in the style of vintage train carriages and railway memorabilia.

## Did you Know - Ken Mumford

Some more of the nations oddities this month:

### SIR NIGEL GRESLEY'S 'Automatic Pilots'

On the London to Edinburgh non-stop run, in the DOWN direction, crews changed north of York, and in the UP direction just south of Wiske Moor troughs - both using a Gresley's corridor tender. The sight of a driver and fireman walking through the train never failed to give at least one American tourist palpitations and another chance of the antique jest about automatic pilots!

### Slip Coach

Whilst travelling, in 1923, on a Ravensglass & Eskdale Railway, I travelled in the rear of the coach next to the slip portion (when there was slip-coach working). The slip guard, who reminded me of a postal telegraph boy, pulled the pin out by means of a rope and then presumably, reduced speed by a brake application. To my surprise he then leapt off his train and raced ahead and seconds after we cleared the point, he threw it over allowing his following vehicle to leave the main line and come to rest at its appointed place. (Eric Shimmon - Derby.)

### FGW's new toy?

A replica of Stephenson's 'Rocket' was at the Avon Valley Railway for running-in in early February 2010. One person's comment was:- "I hope they keep it locked up overnight as FGW are desperate for motive power!"

### Really!!

- [1] In 1913 there were about 600 rail-connected collieries in South Wales.
- [2] After 1963 the occasional wagon of coal for St. Ives (Cornwall) was towed in and shunted by a DMU!!
- [3] A fireman working on the 'Duchess' Pacifics recalls with enthusiasm how once they had reached 120 mph as a result of his shovelling!

### Pannier Tank to the rescue

In August 2000 a very unusual working for pannier tank No. 9600 (when it was part of the Birmingham Railway Museum collection) was to exchange 3 Mark 1 compartment coaches for 3 mark 1 open ones from Peak Rail in Derbyshire. 9600 was the only locomotive (steam or diesel) approved by Network Rail that had an axle load that could be used on the line between Ambergate and Matlock.

### Don't use the WD for passenger work!

WD 2-8-0s were only pressed into passenger service IF nothing else was available as they were renowned for 'shuttling' - the loco's reciprocating masses were only partially balanced, causing violent fore and aft movements between the loco and tender at over 40 m-p-h!

### SOUTHERN COUNTIES RAILWAY SOCIETY

A club for anyone interested in the railways of Southern England.

The A1 Steam Locomotive Trust  
New Steam for the Main Line

# TORNADO TO HAUL 'THE WHITE ROSE' EXCURSION FROM LONDON TO YORKSHIRE ON SATURDAY 27TH APRIL 2019

## 100mph new steam locomotive's first railtour to Harrogate

The A1 Steam Locomotive Trust, the registered charity that built, owns and operates world-famous 100mph new steam locomotive No. 60163 Tornado, has announced a new railtour which will take the locomotive on a railtour to Harrogate for the first time. 'The White Rose' will run from London King's Cross picking up at Potters Bar and Peterborough to Leeds, Harrogate and York on Saturday 27th April 2019. Since completion in Darlington in 2008, new Peppercorn class A1 Pacific No. 60163 Tornado has covered over 100,000 miles and seen service on the Network Rail main line and heritage railways right across Great Britain. Highlights have included three Royal Trains including the naming by TRH The Prince of Wales and The Duchess of Cornwall in February 2009; BBC Top Gear 'Race to the North' with Jeremy Clarkson on the footplate; 'The Winton' train to commemorate the 70th anniversary on the Kinder Transport; the rescuing of stranded commuters in Kent; the re-opening of the Settle to Carlisle Railway; the first steam locomotive in the UK to achieve 100mph for 50 years; featuring in two BBC documentaries, 'Absolutely Chuffed – the Men Who Built a Steam Engine' and 'Tornado the 100mph Steam Engine', and starring in Paddington 2 the movie. In its original incarnation, 'The White Rose' express ran from London King's Cross to Leeds Central and Bradford Exchange stations. It was frequently hauled by Peppercorn class A1s as well as other former LNER express passenger steam locomotives and even the iconic prototype Deltic diesel locomotive. The train ran from 23rd May 1949 to 13th June 1964 when it was replaced by 'The White Rose Pullman' which was withdrawn on 4th March 1967. Between 2001 and 2005, 'The White Rose' was briefly revived by Great North Eastern Railway (GNER) using three former Regional Eurostar trains sets. Initially the GNER 'White Rose' services ran between London King's Cross and York, then, after clearance was given, between London and Leeds.

Tornado's celebration of the 70th anniversary of the first run of 'The White Rose' will be on Saturday 27th April 2019 – with three attractive Yorkshire destinations in one train. No. 60163 Tornado will be at home heading north from London King's Cross along the East Coast Main Line (ECML). The train continues north through Grantham and Doncaster, the latter where the Peppercorn class A1s were designed and 26 of the original 49 constructed, before leaving the ECML at Hambleton Junction to head west. Tornado then climbs Micklefield bank and descends into Leeds where passengers can choose to alight and explore the city for around five hours. Tornado then takes 'The White Rose' north through the suburban scenery and out into the Yorkshire countryside towards the spa town of Harrogate - a first visit for the locomotive - where passengers have around four hours to explore. The train then departs from Harrogate and heads to York where passengers will have around three hours to visit the city as Tornado is turned and serviced for the return journey. Tornado will then retrace her steps from York via Hammerton and Knaresborough to pick up passengers from Harrogate. 'The White Rose' will then head through Horsforth and Headingley before arriving into Leeds station. From here Tornado will steam east as far as Doncaster where our steam locomotive will be replaced by an electric locomotive to return 'The White Rose' via the ECML to London King's Cross. 'The White Rose' offers the opportunity to relive a bygone age of steam travel, evoking the glamour of the 1930s. Heritage carriages provide a nostalgic journey back in time, where passengers can enjoy the beautiful scenery as plumes of steam drift past the windows, and Tornado's whistle can be heard.

Passengers booking First Class can look forward to luxurious surroundings, travelling in a comfortable and roomy seat with curtains by the windows. For a little more indulgence, there is the First Class Dining experience, with silver service for all meals, each cooked on the train by an elite team of chefs. Passengers can enjoy a full English breakfast on the outward journey and a relaxed four course dinner on the way home as the sun sets, the station lights twinkle and Tornado's reassuring rhythmical exhaust sets the seal on a memorable day out. Alternatively, Standard Class seating is also available for those simply wishing to enjoy the scenery and have an enjoyable day out. A buffet car is available in Standard Class. 'The White Rose' is set to be a wonderful day out for all, and the ideal way to celebrate a birthday, anniversary or simply spending time together as friends and family. There is much to see at our three outstanding Yorkshire destinations:

Leeds: shopping in Leeds is a treat, with its many stunning Victorian arcades, Europe's largest indoor market, Kirkgate Market, and the magnificent Corn Exchange, all steeped in the history of Leeds. In the Victoria Quarter, you'll also find Harvey Nicholls – the first outside of London, and the perfect spot for a mid-afternoon cocktail. For more history and culture, Leeds has a wealth of museums many within walking distance (or a short taxi ride) of the city centre. These include Leeds Art Gallery, the award winning Thackray Medical Museum and Leeds City Museum which explores a million years of history, taking you from the Egyptians to the Romans and beyond.

Harrogate: this is the definitive boutique spa town in the heart of Yorkshire. Its thriving streets buzz with busy Harrogate shops, cafes and restaurants, a favourite being Betty's Café Tea Rooms which celebrates its centenary in 2019. There is nowhere better for a brew than the home of Yorkshire Tea! Possibly the most distinctive feature of Harrogate is its pretty open space that surrounds the town centre, known locally as the Stray, at 200 acres this gives Harrogate town centre a green and spacious feel unique to the town.

York: passengers visiting York can take time to explore the city centre with the historic Minster and Shambles, or enjoy the many riverside bars, cafes and restaurants. For a real railway adventure, the National Railway Museum stands close to York station and passengers may wish to visit the steam giants of the past.

Times (Provisional)	Depart	Return	Ticket Prices (starting from)	
London King's Cross	08:15hrs	22:10hrs	First Class Dining	£249.00
Potters Bar	08:30hrs	21:45hrs	First Class Non-Dining	£169.00
Peterborough	09:30hrs	20:30hrs	Standard Class	£109.00

- First Class Dining: seats a table for two or four in a First Class carriage - Includes the Great British Breakfast, a light lunch and a four course dinner.
- First Class Non-Dining: seats a table for two or four in a First Class carriage - Includes complementary tea and coffee. A buffet car is available.
- Standard Class: seats a table for four in a Standard Class carriage. A buffet car is available.
- Guaranteed Table for Two: £25 per seat to guarantee a table for two in First Class.

For further details about Tornado-hauled trains and how to book can be found via [www.a1steam.com/railtours](http://www.a1steam.com/railtours) or call ticket agent UK Railtours on 01438 715050.

Graeme Bunker-James, Trustee, The A1 Steam Locomotive Trust, commented: "We are delighted to announce 'The White Rose' special steam-hauled train from London King's Cross to three destinations in Yorkshire in celebration of the train's 70th anniversary. Hauled by our famous new 100mph steam locomotive No. 60163 Tornado, the train will travel at high speed along the East Coast Main Line and on to Leeds, Harrogate and York - an unforgettable day out for all who travel. There is even the option to dine on-board and enjoy fabulous dishes using the very best Yorkshire ingredients prepared by our on-board chefs."

This tour is promoted by The A1 Steam Locomotive Trust with UK Railtours acting as ticket agents. All profits will go towards keeping Tornado on the main line in future years. All timings are provisional and intended only as a guide.

## A NEW STEAM LOCOMOTIVE FIT FOR A PRINCE

Project to build Gresley class P2 No. 2007 Prince of Wales has raised 50% of its £5m target

The project to build Britain's most powerful steam locomotive, Gresley class P2 No. 2007 Prince of Wales, is delighted to announce on the 70th birthday of HRH The Prince of Wales, that the campaign to raise £5m to build the new locomotive has passed the half way point. The A1 Steam Locomotive Trust - also the builders, owners and operators of 100mph famous new steam locomotive No. 60163 Tornado - has now spent over £2m on construction of the new locomotive and received over £2.5m in donations with over £3.1m pledged. The class P2 2-8-2 'Mikado' locomotives were the most powerful passenger steam locomotives to operate in the UK, designed by Sir Nigel Gresley to haul 600 ton trains on the arduous Edinburgh to Aberdeen route. Sadly, the design was never fully developed, and they were rebuilt in 1943/44 and scrapped by 1961. The A1 Steam Locomotive Trust (a registered charity) is building the seventh member of this class over seven years at an estimated cost of £5m. The project will demonstrate how the design can be fully realised through use of modern computer design techniques, enabling the new locomotive to deliver its full potential hauling passenger trains at high speed across today's national network.

The news that the project to build No. 2007 Prince of Wales has raised £2.5m of the required £5m comes five years after the announcement that Britain's most powerful steam locomotive would be named in honour of HRH Prince Charles, The Prince of Wales, to coincide with his 65th birthday celebrations – HM The Queen kindly approved the use of His Royal Highness's name for the new locomotive. The A1 Steam Locomotive Trust's first new steam locomotive, Peppercorn class A1 No. 60163 Tornado, was completed in 2008 and officially named by TRH The Prince of Wales and The Duchess of Cornwall at York station on 19th February 2009. There have been many steam locomotives named after The Prince of Wales over the years. These included Gresley class A3 No. 2553 (later No. 60054) Prince of Wales, sister locomotive to No. 4472 Flying Scotsman, which was named by HRH The Prince of Wales (later King Edward VIII) on a visit to Doncaster Works, where the original Gresley class P2s were designed and built, on 11th November 1926. This locomotive was scrapped in 1964.

Public interest in seeing a new Gresley class P2 become a reality sooner rather than later is high with almost 900 people having already signed up to the 'P2 for the price of a pint of beer per week' (£10 per month or more) Covenant scheme since its launch. In addition, funds have been raised through The Founders Club (over 360 people have donated £1,000 each – target 100 people, now closed), The Cylinder Club (the target of 100 people to each pledge £1,000 each achieved – now closed), The Boiler Club (over 165 people have pledged £2,000 each - target of 300 people), The Mikado Club (the target of 200 people to each pledge £1,000 reached – now closed), Dedicated Donations (over £315,000 from existing supporters sponsoring a variety of components) and the sponsorship of the locomotive's distinctive front-end by The Gresley Society Trust. This means that the project has already raised – including Gift Aid – £2.5m and received pledges of £3.1m of the required £5m.

Over the next 12 months, the Darlington based team aims to:

- Complete the pony truck
- Select the manufacturer and place the order for the boiler
- Make substantial progress on the tender tank and frames
- Finish the detailed design of the electrical system
- Complete the overhaul of and fit two steam driven air pumps
- Manufacture and take delivery of most of the coupling and connecting rods
- Complete the cylinder block design with construction nearing completion
- Start manufacture of the valve gear.

Mark Allatt, P2 Project Director and Trustee, The A1 Steam Locomotive Trust, commented: "HRH The Prince of Wales has been a fantastic supporter of Tornado and along with HRH The Duchess of Cornwall formally named the new locomotive in 2009. Since then, Tornado has hauled the Royal Train on no less than three occasions on behalf of Prince Charles, so we were only too delighted to be able to name No.2007 in his honour. It is well known HRH has a passion for our heritage and a particular interest in steam, but also the skills and craftsmanship required to build a steam locomotive from scratch. It is a clear demonstration that the UK can still turn its hand to quality heavy engineering, making use of modern design and construction techniques whilst engaging and inspiring a new generation that nothing is beyond the realms of possibility."

"The past five years have seen dramatic progress towards our aim of completing new Gresley class P2 No. 2007 Prince of Wales by 2021 and there could be no more appropriate occasion than HRH The Prince of Wales's 70th birthday to announce that our fundraising has passed the halfway point. Now is the time to get on-board this ground-breaking project and help the Trust to raise the £5m needed to ensure its completion in 2021."

# SANTA TAKES TO THE TRACKS WITH A SPECIAL TRAIN FOR CHILDREN WITH CANCER

Local businesses raise more than five thousand pounds to give hundreds of children a treat

The Great Central Railway welcomed hundreds of children living with cancer on Saturday 24th of November. They travelled on board a steam train with their families, meeting Santa and starting the festive season in style.

The railway has worked with local charity PASIC to welcome the children. PASIC gives families in the East Midlands practical and emotional support at what can be a really difficult time. With the Great Central Railway being charity funded itself, it could not have afforded to shoulder the entire cost whereupon more than five thousand pounds has been donated by local businesses towards the total cost. They include Next, Tarmac, Smooth Radio, William Davis, EFS, Magna Signs, Nationwide Windscreens, OCS and its customers, Bond Street Car Service, Mortons and Caterpillar Staff.

Michael Stokes of the Great Central Railway said, "Our Santa trains are always popular and this year we wanted to make the event extra special. We enjoyed welcoming the children and their families on board our special trains to meet Santa. We could not have invited them all without so much support from the business community. Along with PASIC we are very grateful."

Heidi Bucknall, Event's co-ordinator at PASIC said, "It's amazing to have this kind of help from Great Central Railway, it will have a real impact on families living with childhood cancer in the East Midlands. We're very excited about the Santa train and would like to thank everyone who's contributed. The group of nearly 400 are looking forward to a special family outing and much needed break from treatment and all the difficulties living with cancer brings."

After the special day of Santa trains, the Great Central Railway's award winning Christmas services continue at weekends and some midweek days up to the 24th December. (Advance booking is essential.)

## BUY THE POWER OF STEAM THIS CHRISTMAS

This Christmas members of the public will once again be able to sponsor a component on Britain's newest and most powerful express passenger steam locomotive. For a limited time only, parts for giant new Gresley class P2 No. 2007 Prince of Wales will be available for sponsorship to people who are neither 'P2 for the price of a pint' monthly Covenantors or other registered supporters. Components sponsored through the Dedicated Donations Scheme range in price from one of over 1,000 driven bolts & nuts for £25 to the complete exhaust steam injector for £15,000 – an ideal Christmas present for the railway enthusiast in your family. People who subscribe to the Dedicated Donations Scheme will have their names (or that of the gift's recipient) inscribed on the official roll of honour at Darlington Locomotive Works listing the components sponsored, receive a certificate recording the sponsorship and a copy of the drawing of the component. New components for sponsorship will become available as construction progresses.

The class P2 2-8-2 'Mikado' locomotives were the most powerful passenger steam locomotives to operate in the UK, designed by Sir Nigel Gresley to haul 600 ton trains on the arduous Edinburgh to Aberdeen route. Sadly, the design was never fully developed, and they were rebuilt in 1943/44 and scrapped by 1961. The A1 Steam Locomotive Trust (registered charity and builders of famous 100mph new steam locomotive No. 60163 Tornado) is building the seventh member of this class over seven years at an estimated cost of £5m. The project will demonstrate how the design can be fully realised through use of modern computer design techniques, enabling the new locomotive to deliver its full potential hauling passenger trains at high speed across today's national network. Public interest in seeing a new Gresley class P2 become a reality sooner rather than later is high with almost 900 people having already signed up to the 'P2 for the price of a pint of beer per week' (£10 per month or more) Covenant scheme since its launch. In addition, funds have been raised through The Founders Club (over 360 people have donated £1,000 each – target 100 people, now closed), The Cylinder Club (the target of 100 people to each pledge £1,000 achieved – now closed), The Boiler Club (over 165 people have pledged £2,000 each – target of 300 people), The Mikado Club (the target of 200 people to each pledge £1,000 reached – now closed), Dedicated Donations (over £315,000 from existing supporters sponsoring a variety of components) and the sponsorship of the locomotive's distinctive front-end by The Gresley Society Trust. This means that the project has already raised – including Gift Aid – £2.5m and received pledges of £3.1m of the required £5m. Progress building Britain's most powerful steam locomotive continues at Darlington Locomotive Works and includes: Frame plates for engine and tender rolled and profiled; engine's frames erected at Darlington Locomotive Works; all major engine frame stays, brackets, horn blocks, axleboxes and buffers cast (44 in total); over 1,000 fitted and driven bolts ordered and delivered, approximately 800 now fitted to the frames; All 20 wheels for engine and tender cast and proof machined; engine wheelset assembly complete, balance weights manufactured and fitted, tender axles delivered; Preliminary discussions held with boiler manufacturers and forged foundation ring corners manufactured and

machined; start made on boiler fittings with castings for combined injector steam and delivery valves; order placed with DB Dampfloswerk Meiningen to update the design to incorporate modifications and improvements fitted to Tornado's boiler over the last 10 years; Study into ride and suspension completed using rail industry standard Vampire® software; Finite Element Analysis completed on re-designed crank axle to ensure it complies with modern standards; assessment and notified body appointed to oversee certification - first site visit made; Cab erected and cab side window frames fitted; engine footplating and splasher kits delivered and permanently fitted to frames; Smokebox door pressed, details made and door completed; door frame manufactured, smokebox delivered and erected; chimney cast and fitted; Crosshead castings delivered; connecting and coupling rods ordered and manufacture started; Boiler cladding assembly jig built, cladding crinolines and hoops rolled and fitted to jig, cladding sheets made and trial fitted to the engine's frame; Tender frame construction under way, axleboxes and other tender castings delivered from William Cook Cast Products; tender tank procurement process underway; Nameplates and chime whistle delivered; Over £2m spent, £2.5m donated and over £3.1m pledged.

Mark Allatt, P2 Project Director and Trustee, The A1 Steam Locomotive Trust, commented: "This Christmas you can buy a part of giant new steam locomotive No. 2007 Prince of Wales for the railway enthusiast in your family before it is completed; what could be a more appropriate present than helping to recreate the lost days of the steam age? One of the key ways in which we are raising funds for the new locomotive is through supporters sponsoring particular components either on their own behalf, or as a gift for others.

"The lucky recipient of this gift will receive an A4 copy drawing of the component sponsored and a certificate recognising the sponsorship with the dedication worded however the giver wishes. The recipient will have the satisfaction of pointing to the component they have sponsored when the locomotive enters service on Britain's main line railway in 2021. We have many parts on offer, from individual nuts and bolts to the wheels and chimney, ranging in price from £25 to £15,000." Components available for sponsorship for the twelve days of Christmas include:

- 1st day of Christmas – one exhaust steam injector at £15,000
- 2nd day of Christmas – two pony truck tyres at £1,200 each
- 3rd day of Christmas – three piston crosshead cotters at £300 each
- 4th day of Christmas – four pony truck adjustment ring halves at £250 each
- 5th day of Christmas – five foundation ring wash out door escutcheons at £70 each
- 6th day of Christmas – six inlet valves from £1,200 - £1,800 each
- 7th day of Christmas – seven upper superheater elements at £900 each
- 8th day of Christmas – eight footplate brackets from £350 - £700 each
- 9th day of Christmas – nine buffer springs (rear LH buffer) from £65 to £170 each
- 10th day of Christmas – ten hornstay 1in BSW driven bolts & slotted nuts at £30 each
- 11th day of Christmas – eleven frame stays from £300 - £6,900 each
- 12th day of Christmas – twelve valve cover castings at £100 each

...with other parts at prices to suit all pockets, however deep.

Mark Allatt added: "On the First day of Christmas my true love gave to me an exhaust steam injector for a P2. On the Second day of Christmas my true love gave to me two pony truck tyres. On the Third day of Christmas my true love gave to me three piston crosshead cotters. On the Fourth day of Christmas my true love gave to me four pony truck adjustment ring halves. On the Fifth day of Christmas my true love gave to me five foundation ring wash out door escutcheons. On the Sixth day of Christmas my true love gave to me six inlet valves lifting. On the Seventh day of Christmas my true love gave to me seven upper superheater elements drying. On the Eighth day of Christmas my true love gave to me eight footplate brackets holding. On the Ninth day of Christmas my true love gave to me nine buffer springs a bouncing. On the Tenth day of Christmas my true love gave to me ten hornstay bolts and nuts a gripping. On the Eleventh day of Christmas my true love gave to me eleven frame stays separating. On the twelfth day of Christmas my true love gave to me twelve valve covers sealing... and an exhaust steam injector for a P2." To sponsor a P2 component this Christmas email [dedicated.donations@p2steam.com](mailto:dedicated.donations@p2steam.com) for further information.

### Steeple Grange Light Railway

On November 11th, an event took place on the Steeple Grange Light Railway. The 18 inch gauge railway follows the course of the Killers Branch of the Cromford & High Peak Railway. The quarry served provided the stone for all the headstones for the Commonwealth War Graves Commission and were exported by rail from the Killers Branch and out onto the national network at High Peak Junction. To mark the 100th anniversary of the end of the First World War three headstones were specially produced for Wirksworth, Middleton and Steeple Grange. These were conveyed from Middleton at the north end of the SGLR to Steeple Grange by a narrow gauge replica of one of Hopton Stone's private owner wagons. The Wirksworth stone went on by horse drawn gun carriage to the 1000 year old St Mary's Church. The Steeple Grange one was located at Steeple Grange Station along side the C&HPR and the Middleton stone was returned by rail to Middleton for transport into the village later in the day. *Martin Miller*
