Submissions & Contributions

Railtalk Magazine, a magazine written by the Enthusiast for the Enthusiast. So why not join the team. We are always looking for talented photographers and writers to join us at Railtalk. Be it though pictorial submissions or via a written article featuring an event or railtour, we greatly appreciate any contributions to the magazine however big or small.

Photographic Contributions

All Photographic contributions should be sent to us via email, post or via the members section page on our website. Contact addresses are provided above.

All images should be provided at a resolution of at least 2400px x 1700px at 240dpi.

Welcome to Issue 170

Well with winter nearly upon us, and not long until the shortest day, lets all hope that 2021 can be a better year for getting out and about. Looking at the photos in this issue, there is certainly plenty of change happening in the UK at the moment.

As many regular readers will know this is my favourite time of year due to the fact that the RHTT runs past my office door once a day and this year we have an abundance of Class 37s to keep us entertained. I am not sure how many combinations there have been but just one request to DRS, can we please have 37 422 and 37 425 up here to complete the livery permutations.

East Midlands Railway has announced this month that it has selected 'Aurora' as the brand name for the fleet of Class 810 electro-diesel intercity trainsets which Hitachi Rail is to supply for use on the Midland Main Line between London, Nottingham and Sheffield from 2023. The name was selected for its two meanings: the Roman goddess of the dawn, representing a new start for the route; and the Northern Lights, aurora borealis, which EMR said was 'created by the transfer of the sun's solar energy — matching Aurora's ability to run under electric power'.

In July 2019 East Midlands franchisee Abellio announced that it had selected Hitachi to supply and maintain 33 five-car 200 km/h electro-diesel trainsets at a cost of £400m. The fleet will be financed and owned by Rock Rail East Midlands. So does this make it a monopoly for Hitachi on Britain's railways then, with the East Coast, West Coast and Great Western routes already have or ordered them, plus the EMUs in Scotland?

Proof that time flies is the news this month that ScotRail has announced that it has started work to refurbish its fleet of Class 380 electric trains ahead of their 10th anniversary later in 2020. The makeover of the fleet will see new flooring, new seat upholstery, a paint refresh, and general repairs to tables, bins and handrails completed. The overhauls will take place at ScotRail's Shields Road Depot in Glasgow, with each train expected to be out of service for around two weeks planned. I really can't believe that they have been around for 10 years.

And look forward to seeing some new Network Rail engineers wagons on the track soon as Wascosa has secured a major wagon leasing contract with UK railway network owner and infrastructure manager,

Network Rail. Under the terms of the contract, Wascosa will provide a total of 570 wagons, to be built by Greenbrier Europe and which will be maintained as part of the 10-year deal in partnership with leading UK train operator GB Railfreight.

In addition to the Falcon box wagons, which it will be leasing for site work along with JNA Big Box wagons for bulk ballast transportation, Wascosa has developed a modular wagon for the carriage of track panels, sleepers, switches, rails and loose materials, made possible by a range of innovative superstructures which can be mounted on a fleet of 60' container flats.

Wascosa said: "This groundbreaking solution for Network Rail confirms Wascosa as the leading provider of freight wagon systems in Europe and positions the company perfectly for future growth in the UK."

Thanks for all the photos sent in this month, we really appreciate the time taken to send them to us.

Until next month, stay safe.

Andy

Avanti West Coast announces the name of its new Pride Train - Progress

Progress has been chosen as the name of the UK's first fully wrapped Pride Train - 11 carriages, 265 metres long wrapped top-to-tail in the progressive pride flag colours. On National 'Coming Out Day', railway engineer Edward Hitchon Godfrey was announced as the winner of the naming competition which received over 1,500 entries. The introduction of Pride Trains helped Edward come out to colleagues and his family and winning this competition helped him come out publicly.

Announced on national 'Coming Out Day', the name was chosen as part of a competition calling on members of the public to submit suggestions to give the train an identity.

The competition was announced at the inaugural journey of the inter-city rail operator's Pride Train in August where the 11-carriage, 265 metre-long Pride train was launched by a full LGBTQ+ crew with a service from London Euston to Manchester Piccadilly.

Over 1,500 entries were received, many suggesting the name Progress for the nation's first fully wrapped Pride train which is covered head-to-toe in the colours of the Progressive Pride flag.

Edward Hitchon Godfrey has been named as the winner after his powerful submission suggesting the name Progress outlined how the introduction of Pride Trains helped him to come out.

Edward Hitchon Godfrey said: "As a young engineer entering the rail industry five years ago, I was struck by the stark contrast between a relatively progressive industry on the surface and the sometimes intolerant views expressed in the background.

"Trainbows, Pride Trains and events gave me - a closeted bisexual man - the feeling of support within the industry I love, to come out at work, and to challenge prejudiced views. Winning this competition has solidified my sense

of belonging and given a real boost to my confidence in my identity. To me, the name Progress embodies both a celebration of where we have got to as an industry and as a society, and a recognition that we're not there yet - that there's still work to be done."

Discussing how the winning name was chosen, Avanti West Coast Executive Director - Commercial, Sarah Copley said: "I'm delighted that the name Progress was chosen for the Pride Train. Within a day of the competition launching, an online campaign was started calling for the livery to be called Progress, highlighting the wider LGBTQ+ community's love of the Pride Train and recognition of the progress we are making around diversity and inclusion. Of the 1,500 hundred entries submitted, hundreds suggested the name Progress so it was a clear choice for the judging panel who were very touched by Edward's story.

"We constantly listen to our people, our customers, and the communities we serve to ensure our diversity and inclusion strategy is relevant. Progress is a symbol of Avanti West Coast's commitment to live proud and support Pride 365 days a year."

With a strong focus on LGBTQ+ education, Progress features Pride related information and fun facts during the onboard announcements and is now in regular service along the West Coast Main Line.

Avanti West Coast

▶ Class 390 148 heads north at Boars Head, Wigan on October 8th. *John Sloane*

Macclesfield's heritage celebrated with artwork at station

A bespoke piece of artwork has been installed by Avanti West Coast at Macclesfield station to celebrate the town's heritage. Commissioned by Macclesfield Town Council, the metal mural was created by artist and sculptor, Tim Davies. Its creation was part of a project to produce a unique piece of work for the local community and increase the appreciation of public art in the town. Tim was the favourite artist to deliver the project, following a public consultation with local residents. He designed the artwork from images produced by pupils from five schools in Macclesfield. Featuring landmarks of the town, including designer furniture store, Arighi Bianchi, and the original Hovis Mill, the mural reflects the rich heritage of Macclesfield. It was made using a laser cut artwork technique, which Tim has been developing while creating art with children for the past decade. This is the first time he has used it for a piece on public display. As the gateway to the Cheshire town for commuters, visitors, shoppers and residents, Macclesfield station was chosen as the location for the artwork, where it can be enjoyed immediately after arriving by train, against the backdrop of the town.

Speaking of his first art project at a railway station, Tim Davies, said: "I have a strong record in delivering high-quality public artwork commissions in schools, festivals, theatre and commerce - together with over twenty years of experience working within education and community group settings.

Community engagement and inspiring young people is at the heart of my practice as an artist and I relished the opportunity to work with a new community. It is empowering to see the children's artwork displayed in such a bold and permanent way."

Councillor Janet Jackson MBE, said: "I'm really pleased to see this mural finally installed at the train station. It provides a welcome to Macclesfield depicting a number of our iconic heritage buildings and setting the scene with regards to the character of the town."

Laura Harper, Avanti West Coast Station Manager at Macclesfield, said: "We're delighted to have this beautiful artwork on permanent display at Macclesfield station - it provides a cheerful welcome to the many people arriving by train each and every day. Tim and the local children have perfectly captured the spirit of this great town and its community, which we're proud to serve, and we're sure this mural will be enjoyed for many years to come."

Caledonian Sleeper

Class 73 966 and 73 971 have just rounded Horseshoe Curve and are crawling along through a speed restriction with the overnight Fort William portion of the Caledonian Sleeper on October 9th. *Jeff Nicholls*

Chiltern Railways reopen Dorridge Station waiting room after heritage refurbishment

Chiltern Railways has officially reopened Dorridge station waiting room following several months of refurbishment work to restore the heritage of the station.

The train operator has worked with the Friends of Dorridge Station community group to match the quality and heritage of the waiting room on platform one which was transformed several years ago.

The project began earlier this year and was officially reopened by Piers Wolf, Chairman of the Friends of Dorridge Station.

Funded primarily by Chiltern Railways with additional funding provided by a grant from the Railway Heritage Trust, the restoration project includes vintage posters and paint work inside the waiting room, installation of

a newly restored original fireplace, refurbishment of the floor, new lights and heater and two new heritage-style benches.

Richard Allan, Managing Director for Chiltern Railways said, "Chiltern Railways are committed to improving our stations for our customers and ensuring that they are a pleasant place to be. We're pleased to be able to re-open Dorridge station waiting room with these new improvements while still maintaining the original architecture and heritage feel. We hope our passengers will be pleased with the refurbishment that has taken place."

Piers Wolf, Chairman of the Friends of Dorridge Station said: "Following our creation of a waiting room on Platform one in 2014, we were concerned that passengers

on Platforms two/three were less well served so we are very grateful to Chiltern Railways for listening to us and working closely to our wish-list in order to provide such a welcoming and attractive environment. We value our relationship with Chiltern and hope to continue finding ways whereby, together, we can restore the station's 1930's appearance while providing a 21st century passenger experience."

Paul Childs, Company Secretary for Railways Heritage Trust said they were pleased to have been able to support the refurbishment of the waiting room, which gave careful consideration to the heritage aspects of the station.

Colas Rail UK Commemorate Network Rail's Andrew Smith

Colas Rail are delighted to announce that their Tamper No. DR75011 has been named in commemoration of former railway colleague and Route Infrastructure Maintenance Manager for Network Rail Western Route, Andrew Smith.

On September 3rd, a nameplate ceremony took place at Network Rail's Swindon sidings. The event was attended by Andrew's family and former colleagues from across the rail industry looking to pay tribute. As part of the ceremony the family received their own name plate to serve as a reminder that his legacy will continue with the railway family.

In a touching tribute, Network Rail's Safety Force Task Leader, Nick Millington said, "It's a privilege for us as work colleagues to join Andrew's family in naming the brand-new tamper after our friend and colleague."

Colas Rail UK's OTM Delivery Manager, Roger Nicholas was also a close friend of Andrew and speaking at the event he said, "I'm delighted Network Rail and Colas Rail UK could work together to honour Andrew's legacy to the railway industry, seeing this Tamper on site will serve as a reminder that

Andrew is always with us"

Andrew's first involvement with the railway was helping with steam engines as a youngster at the Strathspey Railway. After he got his degree in transport engineering, he worked on The Royal Scotsman as train master in 1988.

4 years later, he moved to London Underground Ltd to manage the refurbishment of the Piccadilly Line fleet. In August 1996, he moved to Alstom, which saw him spend a year in Stockholm, Sweden working on the Arlanda airport rail link.

Returning to the UK, Andrew worked for Network Rail in various roles before settling on the western route. He was working in Swindon until he left in 2019 to join Network Rail consulting. Andrew was a good friend of Network Rail's Western Route and was a keen innovator, he will be remembered fondly by the railway family.

DB Cargo UK signs new 10-year contract with Brett Aggregates

Rail freight operator DB Cargo UK has signed a new 10-year contract with Brett Aggregates, the largest independent producer of sand and gravel in the UK.

The contract will see DB Cargo UK transport millions of tonnes of sea-dredged products every year from Brett's marine aggregates terminals in Ipswich, Cliffe and Newhaven. The product will be transported primarily for use in the construction sector.

DB Cargo UK's Head of Sales Roger Neary said the new contract further cemented the company's relationship with Brett which was founded on strong teamwork and collaboration.

A great example of this, he said, was DB Cargo UK's recent work with Brett and Network Rail which saw the first freight train in almost 25 years transport product out of Newhaven Port.

"Rail freight is the most economic and environmentally-friendly means of transporting large volumes of aggregates, with each train taking the equivalent of 76 HGVs off the UK's already congested road network. We're proud of our partnership with Brett and look forward to delivering safe and reliable rail services for them for years to come," said Roger.

Tom Longland, Managing Director of Brett Aggregates, said: "The Brett Group has recently opened a new marine aggregates terminal at Newhaven Port with access to over 50 million tonnes of consented marine aggregate.

This new agreement with DB Cargo enables joint plans for further growth in rail freight from Brett marine aggregate terminals and the development of further urban rail terminals in London."

"It builds on the significant investment made by Brett in its new marine terminal at Newhaven, capacity enhancements at existing terminals at Cliffe and Ipswich, and concrete plant at Wembley which will supply the London and South East construction market by rail," he added.

▶ On October 15th, the 4M51 Southampton to Trafford Park passes Worting with Class 66 789 in charge. *Michael Bennett*

GB Railfreight Announce Lineas Partnership Extension

GB Railfreight (GBRf) are very pleased to announce an extension to their European freight operation in partnership with LINEAS, the largest private rail freight operator in Europe.

The existing traffic flow from Antwerp through to Irvine will continue for an additional two years. This announcement marks the extension of the existing contract which will now run until the end of December 2021, marking a 5-year relationship with LINEAS for this 'hook and haul' flow. The service has so far averaged around 30 trains a year and will continue to run approximately between two and three times per month.

The trains, which arrive in Calais from the LINEAS Rail operation, will consist of roughly 20 ICA Tank Rail Wagons

and will carry 1200 tonnes of product per train. It will be transporting kaolin clay for the process of whitening paper which is produced at the UPM Caledonian Papermill in South Western Scotland.

GBRf will normally collect the product on a Tuesday night, run through the channel tunnel with Electric Traction. A Class 66 Loco then hauls through to UPM Irvine to arrive at around 7pm on the Wednesday night. Following unloading, GBRf return the empty set of wagons back to the Channel Tunnel by Friday night for a path back to Calais.

GBRf are currently operating intermodal services to and from the three largest ports in the UK. The Antwerp to Irvine operation builds on the company's existing

intermodal services which is currently being managed by Julie Garn. This follows other European Traffic flows that GBRf have operated in the past.

John Smith, Managing Director of GB Railfreight, said: "I am delighted to announce that we are continuing our partnership with Lineas. Our strong relationship goes back many years and we are pleased to continue it until December 2021. This service will be the longest term of operation for running services through the Channel Tunnel for GBRf, something we are extremely proud of. In addition, the shift to rail freight is a vital part of decarbonising our transport system. Our partnership with LINEAS shows our commitment to doing our part to reach the ambitious target of net zero emissions by 2050 and we hope to build on this going forward."

Geraldine Leyman, Senior Key Account Manager at LINEAS added: "We are extremely pleased to have extended this contract. Our relationship with GB Railfreight is one we are extremely proud of and is the greatest example of the importance of cross-border cooperation."

We couldn't be happier with the service GBRf provide on the UK side and this contract extension is proof of that. We look forward to continuing this successful partnership in the years ahead."

With Class 60 021 in charge, the 6E09 from Liverpool Biomass Terminal to Drax rolls high above Northwich on the beautiful autumn morning of October 20th. *Jeff Nicholls*

▶ Class 66 783 crosses Carr Mill Viaduct on October 12th working Tuebrook Sidings - Ashton in Makerfield loaded stone.

Derek Elston

Class 66 789 is seen at Kempseye on October 29th with the 4Z78 01:01 Southampton Western Docks - Donnington RFT. *Keith Davies*

Class 66 782 passes through Doncaster on October 15th working the 6E86 08:20 Middleton Towers GBRf to Monk Bretton Redfearn.

Derek Elston

GB Railfreight agrees deal for five new Class 66 locos

GBRf is pleased to announce an agreement to bring an additional five Class 66 locomotives from Germany in cooperation with Beacon Rail Leasing.

The first two, classified as 29004/29005 have been delivered to EM Doncaster ready for conversion to GBRf's specification and UK railway standards. The remaining three locomotives will be delivered throughout 2021.

The first two locomotives are low-g geared heavy haul 60mph locos which will benefit GBRf's heavy-haul capability, while the remaining three are 75mph locomotives.

The locos will be delivered into GBRf service commencing early April 2021 with the programme of conversions being undertaken by EMD at their Doncaster and Longport facilities, this will include the fitting of air conditioning, sound proofing, cab improvements, and new cab double glazing. In addition, the locos will be fitted with the most up to date GSMR and TPWS safety systems and be painted in GBRf livery. Once in service they will become GBRf 66 793-797 locos.

This announcement reinforces GB Railfreight's status as one of the fastest growing and most exciting transport companies in the UK. The locos will provide additional

capacity to build on GBRf's long track record of successful delivery for its customers

John Smith, Managing Director of GB Railfreight, said: "This announcement is another important milestone for GB Railfreight's continued expansion as a company. We are delighted to be bringing these five locomotives to the UK and adding them to GB Railfreight's Class 66 fleet. This agreement also shows that despite the economic uncertainty our country faces, GBRf leads the way with continued investment to put the UK economy back on track. We look to the future with optimism."

Adam Cunliffe, CEO of Beacon Rail, said: "Beacon Rail is delighted to be supporting GB Railfreight with these latest additions and further expanding the long-term relationship between our two companies. The class 66 is a proven performer, being the backbone for the movement of essential goods over recent months. Beacon is committed to further growth of the UK rail freight market through the introduction of these additional locomotives."

Class 66 791 'Neil Bennett' is seen stabled on Roberts Road depot, October 15th.

The station was a junction with a line to Gloucester closing in 1959, part of which can still be walked as the Ledbury Town Trail. *Chris Morrison*

BRITS TO SHUN OVERSEAS TRIPS AND AIR TRAVEL IN BID TO BECOME MORE SUSTAINABLE

Covid has changed the way Brits holiday, as nearly a quarter (24%) reveal they intend to go on more staycations than trips abroad, and 22% will change how they get around the UK and abroad, post-Coronavirus. Seen as part of the 'Covid Climate Effect', more than a quarter (27%) say the pandemic and its side effects have motivated them to adopt more environmentally friendly travel behaviours - more than double the amount influenced by environmental activist Greta Thunberg (12%), according to the research by YouGov for rail operator LNER.

Younger generations are leading the way as half (48%) of millennials (25-34) say they will spend time on home soil than overseas, and nearly a quarter (23%) of those aged 18-24 admit they are rethinking their future use of flying to get away both in the UK and abroad, more than any other generation.

One in five (20%) are reconsidering air travel for future trips, whilst a third (33%) are looking to increase their use of trains, with those aged 18-24 selecting rail (46%)

as their favourite method of transport for holidays within the UK and abroad. Over half (57%) of Brits took one to five abroad trips every year prior to Covid, but this drops to only 40% when thinking about how many they'll take in 2021 and beyond.

In fact, six in 10 UK adults (58%) are now making an effort to live more sustainably generally, compared to just 20% who didn't stop and think about their lifestyle and the effect it had on the environment prior to lockdown.

When it comes to the reasons WHY people are making these changes, a quarter (28%) say stockpiling made them more environmentally friendly, admitting it made them think about how much they consume generally. Sir David Attenborough joining social media (12%) and watching more sustainable lifestyles in documentaries like Zac Efron's 'Down To Earth' (7%) also had an impact.

Brits also pointed to noticing a reduction in air and noise pollution (40%), spending more time outside, in their garden or local parks (40%) and being able to hear

birdsong and take more notice of nature (38%) as the biggest reasons for becoming more environmentally conscious since lockdown.

UK adults are keen to keep these habits going too - over four in 10 (43%) reveal they will or would consider recycling more in the future, with shopping at local stores (28%), using less water (26%) and growing their own veg (23%) topping the nation's eco-resolutions for the future.

With the nation turning green, LNER is encouraging the use of more sustainable methods of transport for future travel plans with its new fleet of electric bi-mode Azuma trains, which produce less than a third of the carbon of other modes of transport.

LNER Managing Director, David Horne, said: "Despite how hard the past few months have been, it is positive to see how as a nation we're collectively striving towards a greener future. Lockdown made many people stop and think about the world we live in, and how we can

protect our planet - it's so encouraging to see younger generations leading the way here, swapping overseas jaunts for staycations in the wake of Covid. When it comes to reaching a UK holiday destination, it's no secret that trains are one of the most sustainable ways to travel, producing less than a third of the carbon of other modes of transport and proving just as fast, door-to-door."

LNER

▶ Azuma Class 801 229 is seen at Hornsey on the final leg of its journey from Edinburgh to London King's Cross on October 22nd.

LNER HELPS CUSTOMERS TO RECYCLE ON THE MOVE

London North Eastern Railway (LNER) is introducing disposable cup recycling stands across its managed stations, making it easier for customers to recycle some of the 2.5 billion single use cups that are thrown away

The first recycling stands, which with the customer's help enable the collection of cups separately from the liquids and lids, are now in place at York Station. Doncaster Station and Wakefield Westgate Station will

in the UK each year. Until now, disposable cups have provided eco-conscious customers with a challenge due to the plastic liner inside and contamination from their contents, preventing the cups from being recycled in traditional green recycling bins.

Thanks to advances in technology and recycling processes, and through the provision of special disposable cup recycling stands such as those being introduced across the LNER route, customers can be confident that when they have a drink on the move, they can do so in an environmentally responsible way.

soon follow with remaining LNER managed stations receiving the stands as part of the next phase of the roll-out.

Thomas Miles, Environmental Partnership Manager at LNER, said "At our larger stations we can see more than 2,000 disposable cups thrown away each day. As part of our commitment to being a responsible business, we're pleased to introduce our new recycling stands, helping customers to recycle when travelling through our stations. More than ever before, people are focused on the impact they are having on the world around them so we hope that these new cup recycling stands will be a success."

Cups collected in the stands will be gathered by Forge Recycling, where they are sorted and baled to optimise collections. These are then transported to a specialist paper mill where the plastic liner is stripped from the paper fibres. The paper fibres are upcycled into luxury papers for use in new products while the liner is burnt for energy recovery within the paper recycling process

meaning there is zero waste to landfill.

Sam Goodall, Operations Director at Forge Recycling, said: "Forge Recycling is excited to be working with LNER on the introduction of their new cup recycling scheme in stations across the route. With the added support we've received from Hubbub and Starbucks as part of The Cup Fund, we're thrilled to be able to recycle more cups per year and to do our part in supporting LNER's environmental goals."

The move by LNER is just the latest step the East Coast operator has taken to help eco-conscious customers. LNER previously introduced an onboard reusable cup discount of 25p, rewarding customers for using their own reusable cup when purchasing a hot drink onboard. While this is currently on hold to reduce the risk of Covid-19, this scheme helped avoid the use of 22,000 disposable cups in 2019.

Network Rail

▶ Class 97 302 and 97 303 top'n'tail the 11:00 Derby RTC to Carnforth test train, heading north through Moore on October 6th. *Barry Longson*

▶ On November 5th, power cars Nos. 43050 and 43060 work a Bristol to Tyseley test train past Marston footbridge. *Ken Mumford*

▶ Network Rail's New Measurement Train headed by power car No. 43062 crosses Malvern Common with a Derby RTC to Hereford run on October 27th. *Neil Pugh*

▶ Colas Rail's Class 37 421 was noted in Doncaster West Yard on October 20th waiting for its next duty with a Network Rail monitoring train.
Lee Stanford

▶ MPV Nos. DR98920 and DR98970 stand in the little used bay platform at Wellington on October 24th with a Kings Norton to Wellington RHTT working. *Richard Hargreaves*

▶ On October 24th, the new way of powering track recorders is seen for the first time at Scunthorpe as power car No. 43050 arrives on 1Q68 from Doncaster. Due to a points failure at Gunhouse Jct. it was running a bit late, so it was a quick change of ends before No. 43060 led the way back west towards, ultimately, Derby RTC. *Steve Thompson*

▶ On October 14th, Class 37 419 sits in the bay at Bridlington waiting departure time with a RHTT working to York. *Class47*

▶ The NMT with power cars Nos. 43014 and 43062 pass through Kemble heading to Gloucester on October 27th. *Ken Mumford*

▶ Class 37 407 is seen upon arrival at Bridlington on October 14th with a RHTT working from Grimsby. *Class47*

Network Rail

▶ HST Power cars are now being trialled by Colas on the Network Rail test trains. Nos. 43050 and 43060 could be found at Doncaster on a sunny October 22nd. *Lee Stanford*

No drinking alcohol at Norwich Station please

Greater Anglia is reminding the public that the concourse, platforms and car park at Norwich station is an alcohol-free zone

The station is part of Norwich Constabulary's city centre alcohol-free zone, which means that no-one can drink alcohol at the station - other than in the pub.

James Reeve, Greater Anglia area customer service manager with responsibility for Norwich station, said: "We'd like to remind customers that the station, including the car park, is an alcohol-free zone and we are politely asking people not to drink alcohol while at the station.

"New signs have been installed at the station to remind people that the station is part of the city's no drinking in public zone and we are working with the British Transport Police to make sure people keep to this rule."

It is illegal to drink alcohol in public within the city centre alcohol-free zone.

Anyone who breaks the rule could be convicted and fined up to £500, and faces arrest if they don't hand over any alcohol when asked to by a police officer.

Greater Anglia is operating a near normal timetable from Norwich station, with the exception of some Norwich-London intercity services.

Anyone at the station should wear a face covering at all times – with a maximum penalty of up to £6,400 for failing to comply.

People should also observe social distancing, which has been made easier by Greater Anglia with signs around the station and a one-way system into and out of the station.

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

Cancelled train - who refunds?

Q: I have a trip booked from Penzance to Glasgow which includes one Anytime ticket and two Advance tickets and which has now been cancelled.

I ordered the tickets via Splitmyfare. They sent me a email on Friday saying that the trains have been cancelled and to contact them (well, rather to contact RailEasy - they must be a subsidiary of RailEasy) to arrange a refund if I can no longer travel. I emailed them to ask to arrange a refund but they say that I have to claim this from the TOCs rather than themselves. This does not ring true to me at all. I've contacted the TOCs (GWR help and Avanti West Coast) and Avanti have already confirmed that the retailer would be responsible for refunding. I fully expect GWR to say the same thing. I've already collected the tickets which probably complicates things. As the tickets are £200 odd quid, I'm getting a bit worried. Does anybody have any advice to get Splitmyfare to pay up?

A: Assuming you no longer wish to make the journey, the refund request needs to go to Raileasy.

If you do wish to make the journey, and you end up being delayed as a result of the cancellation, a Delay Repay claim would go to the company whose cancellation caused the delay.

For example if you do travel and the cancellation results in a delay of 60 minutes or more, compensation would be to the value of 100% of the cost of the single journey from Penzance through to Glasgow.

It's general law that if some product or service is not provided, is defective, or whatever, you get the money back from whoever you paid it to. This is entirely to avoid you getting the runaround between organisations. Your refund should come from whoever you paid money to.

If the actual service provider has systems or customer experience in place to do it as well, so be it, that's an extra. But anyone in business as an agent should have procedures to do refunds as well, compliant with the law, and the service provider should have ensured this was in place at their agent.

Can't buy tickets more than about two weeks ahead

Q: I'm trying to buy Chesterfield to Berwick upon Tweed tickets for 2nd to 9th Jan. All booking engines state no tickets available. Experimentation shows that tickets are only available if the return is before 8th November. Can anyone explain what is going on? I presume this is somehow COVID related.

A: Yes it is *COVID related*. The normal twelve week booking horizon is not that at the moment. It is something like two to four weeks out but will get closer and closer to twelve weeks over the next few months. It varies per area, given 2nd and 9th Jan are Weekend (Saturdays in this case) we haven't had 12 week booking times consistently for quite some time.

So sadly, it is a waiting game and there is pretty much zero chance of even getting a reliable date for buying them at the moment. You can certainly try and sign up for "alerts" from the operators when they release tickets although they have been known to fail so always worth a regular manual check.

One thing that IS pretty important, if you manage to buy a flexible ticket (Off peak return for example) ahead of time from a retailer then be advised that the chances are the itinerary you get given will be a load of rubbish on the day and all the times will be different which could completely spoil your plans. Depending on operator you'd then have to fuff around getting a separate seat reservation when the tickets are released so there's little incentive to buy in advance for this sort of situation at the moment.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

Greater Anglia improves café bar deals despite new restrictions to operating hours

Greater Anglia has made some changes to its on train catering facilities as a result of the latest government guidance. In line with other hospitality venues, café bar services on the train operator's Intercity services between Norwich and London must close between 10pm and 5am.

Therefore, with immediate effect, there will be no catering service on the 7pm, 8pm and 9pm services from Norwich to London Liverpool Street, nor the 9.30pm, 10.30pm and 11.30pm services from London Liverpool Street to Norwich. The 8.30pm service from London Liverpool Street to Norwich will have a catering service as far as Stowmarket.

Michael Wyatt, Greater Anglia's Business Development Manager - Catering, commented: "The evening services out of Norwich are still seeing very few passengers and on some of them we would be unable to provide a service for the entire journey because of the 10pm cut off, so for simplicity we have decided to temporarily suspend these services while the restrictions are in place.

Our teams will instead be assisting the business by carrying out passenger counts so that we can continue to advise customers on the less busy trains via our website, and they will be doing additional cleaning around the station to help keep everyone safe. My team is doing a fantastic job under difficult circumstances.

If passengers could help by observing social distancing instructions and wearing a face covering at the café bar, unless they are exempt, we can ensure that we all protect each other."

Despite the restrictions and fewer passengers, Greater Anglia's catering team aims to continue to provide an excellent service for customers, introducing a Hot Drink Loyalty Scheme with every fifth drink free, and the chance to win a Lavazza coffee machine in December. They are also offering big discounts on filter coffee, tea, Adnams Southwold Bitter, Bitburger Lager and Adnams Copperhouse Gin & Tonic for a limited time.

Staff are undertaking additional cleaning at the café bar and have been issued with hand sanitiser for themselves and customers. Contactless payment is encouraged and social distancing signage has been installed to help passengers keep apart and protect staff.

Over the last year, Intercity services have been upgraded to brand-new, longer state-of-the-art trains with all mod cons on board, including plug and USB points, fast free wifi, air conditioning, improved passenger information screens, better accessibility features and dedicated cycle spaces.

Greater Anglia testing train cleanliness to boost effectiveness of sanitisation

Greater Anglia is now routinely using new testing equipment to make sure trains are cleaned as effectively and efficiently as possible. The company has five 3M hygiene monitoring units which are used weekly to quickly detect biological residue on high touch areas on board trains. A swab is taken from the area being tested, which is checked for Adenosine Triphosphate (ATP), an indicator of biological residues. The swab sample reacts with a lab-manufactured enzyme - replicating that found in fireflies called luciferase - in a self-contained device. The energy from this reaction creates light. The more light detected, the greater the amount of biological residue on the surface tested.

Test results are then synchronised with one of Greater

Anglia's servers, so that train cleaning managers can get a picture of the efficiency and effectiveness of cleaning regimes across the whole of the network, enabling the company to provide optimal conditions for the sanitisation of trains. This is the latest piece of equipment in an arsenal of cleaning and sanitising equipment Greater Anglia has introduced to keep trains as clean and sanitised as possible.

The company has spent £600,000 on new cleaning measures, including new equipment, extra cleaning routines, new and additional detergents and more staff. New equipment includes seven fogging guns used to spray a fine targeted mist of anti-viral disinfectant which quickly kill off bacteria and viruses in the air, on

floors, furniture, walls, ceilings, other surfaces and large internal areas. Every single carriage on all of Greater Anglia's trains had been fogged by the beginning of September, and the company is now doing them again. Fogging guns are also being used by Greater Anglia's cleaning contractors to sanitise waiting rooms, toilets and other areas at stations Greater Anglia also has eight Pacvac powerful backpack vacuum cleaners, fitted with four filters which clean the air as well as the floor and upholstery - especially useful for "turnaround cleaning" of trains at stations between arriving on one service and departing again on the next one.

Peter Tyler, Greater Anglia head of train presentation, said: "We're doing everything we possibly can to keep

our trains as clean and sanitised as possible. This new testing equipment enables us to check that our cleaning is as effective as possible, so that our customers can travel with us, confident that they are being kept safe. Our cleaning teams have been doing a great job and have really stepped up to the mark to keep everyone safe. Other staff, including our catering and station teams, have also stepped in to carry out additional cleaning on high touch areas such as ticket barriers and ticket machine touch screens."

National Rail

On October 24th, Class 47 593 and 47 712 top'n'tail a Wolverhampton to Windsor & Eton Riverside charter through Purton. *Ken Mumford*

Pass of the season: Thameslink supports young Hatters promoting safe rail travel

Luton Town FC apprentice footballers have this season joined forces with Thameslink to encourage reluctant teens to wear face coverings on trains.

For the 13th year running, Thameslink have given the latest intake of 17- and 18-year-olds at the Hatters a year's free travel to their places of study and training. Some could not afford to attend otherwise.

In return the Academy players are acting as role-models for young rail passengers. Research shows that young men especially are more likely to underestimate the risk of catching or transmitting Covid-19, and are therefore less likely to wear a mask or covering than others.

Tom Moran, Managing Director for Thameslink and Great Northern, said: "Passengers can rest assured that we're keeping our trains and stations clean and safe with long-lasting virucides. All passengers must wear a face covering at all times, at the station and on the train. This includes young people who might not be affected so severely by Covid-19 themselves, but are just as likely to catch and transmit it. We work a lot with young people, to provide confidence building

and upskilling opportunities that make a difference to their lives. This partnership with the Hatters not only

allows young sportsmen to take up opportunities they would otherwise not be able to enjoy but it helps us

spread this important message: wear a face covering to protect everyone around you."

Dale Brunton, Head of Education and Welfare at the Academy, said: "Thameslink have been an excellent partner for Luton Town Football Club, especially for the young men within our Academy, allowing them to develop both on and off the field. We have young men from a wide range of backgrounds and some wouldn't be able to attend training and games if it wasn't for Thameslink's generosity. The partnership also allows our apprentices to give back to the local community via social action days, and at this challenging time they will be proud role models for safe travel by train."

Second year apprentice Coree Wilson said: "The train pass from Thameslink has been invaluable for me during

my apprenticeship at Luton Town. I have to travel on the train every day for training and games and the pass enables me to focus fully on working my hardest to try and gain a professional contract."

First year apprentice Adam Wedd praised the scheme by saying: "The link between Luton Town and Thameslink is fantastic and allows me to travel to and from training and games whilst I'm on my apprenticeship. Without the pass I'd really struggle to get in every day."

Academy graduates who have benefited from GTR's travel support in past years include Sam Beckwith, Corey Panter and Josh Neufville, all now full-time professionals in Luton's first-team squad, and James Justin, now Leicester City's right back, who recently scored his first Premiership goal. Midfielder Sam Beckwith said: "The train passes were a massive help during my time as an apprentice within the academy at Luton Town. The pass allowed me to attend all training sessions and games during my apprenticeship, which had a hugely positive impact on my development. Without this opportunity I'm not sure I would have developed as a player as much."

In early October, Northern Rail removed the final Pacer sets that had been in store at the Keighley and Worth Valley Railway, where the units had become something of a fixture at Keighley Station over the last few months. The departure of the remaining two units might well mark the last Pacer to travel over the adjacent Airedale line where they were previously a fixture; this route was one of the earliest in Northern England to see them in frequent use. On October 8th, Class 144 005 and 144 002 speed through Utley, on the outskirts of Keighley (having headed North to Skipton to reverse, after leaving the heritage line), as 5G44 from Keighley to Worksop. *Ben Bucki*

Brighter and greener stations being delivered in Hampshire and Surrey

Network Rail's Wessex Route 'rewiring and relighting' its stations to save as much as 25% in electricity.

Worcester Park and Andover stations are two of the latest stations to be rewired as part of a drive to replace old and inefficient electrical equipment and incandescent lights at 32 stations in Hampshire and Surrey.

Work started back in April and has also been completed at Shawford and Weybridge stations, as well as South Western Railway's depot in Bournemouth.

As well as completely rewiring the stations, variable controls and automatic settings for the LED lighting have also been installed, helping to reduce electricity consumption by up to 25%.

It will mean improved lighting for passengers and rail staff on platforms, waiting rooms, canopies, toilets, footbridges, ticket offices and car parks.

The 'Rewire and Relight' programme which aims to improve energy-efficiency and reduce the carbon footprint of the stations estate is due to be completed by the end of March 2024.

Mark Killick, Network Rail Wessex route director, said: "People choosing to travel by train as opposed by car are already helping the environment and we're working on making our mode of transport even better for the planet."

The Rewire, Relight project is helping to create more energy-efficient stations and, at the same time, improve the environment for passengers."

Amelia Woodley, South Western Railway's Head of Sustainability, said: "At SWR we passionately believe that a better railway is a sustainable railway, and that's why we're determined to play our part in reducing harmful carbon emissions and combating climate change."

On top of supporting the Rewire, Relight programme, we are also in the process of replacing the lighting at our stations – amounting to around 16,500 bulbs in total. This work, which is set to reduce energy consumption significantly, is currently on course to be completed by the end of the year".

Three years of transformation enters final phase at Queen Street

October marks three years since Network Rail began the main £120m redevelopment of Glasgow Queen Street station, creating a contemporary and fully accessible transport hub. Since October 2017, engineers have transformed Scotland's third-busiest station without closing it to passengers with the new station concourse, entrances and facilities now nearing completion. Work also started to paint 10 cast-iron pillars that support the A-listed 142-year-old barrel shaped, glass roof. Each pillar is over 5 metres tall and they will be sandblasted before being repainted with a blue base, white column and gold top.

Kevin McClelland, Network Rail route delivery director for infrastructure projects, said: "The redevelopment of Glasgow Queen Street has been a remarkable project to be involved with in every sense. While externally the striking new look of the station has been in place for

some time, recent months have seen much of the interior elements being completed during a period when the team also adapted to a new way of working. We are now in the final phase of the redevelopment work, with our focus over the remaining weeks on completion of the high level foyer area to platforms eight and nine, and also painting several of the Victorian pillars within the station, which have been unveiled for the first time in decades. The team is hard at work on these elements as we push towards the station's relaunch at the end of this year, having delivered a modern transport hub for the 21st century and beyond."

Margaret Hoey, ScotRail station manager for Queen Street, said: "The redeveloped station, coupled with our investment in new longer, greener electric trains is transforming what we can offer our customers at Glasgow Queen Street. The new station also provides

an impressive gateway for visitors arriving into Glasgow and for tourists heading north."

Between the autumn of 2017 and 2018, more than 14,000 tons of material, 94 percent of which was recycled, was removed from the station as engineers demolished redundant 1970s buildings in front to clear the way for the start of the construction of the new steel framework.

By September 2019, the striking glass façade of the station's iconic new frontage was finished, with 310 glass panes installed across the 21-metre-high structure, covering an area of 734 square metres.

October 2019 saw the overall completion of extension work to four platforms inside the station to allow longer, greener eight-carriage electric trains to run.

The unprecedented challenges of 2020 and the Coronavirus pandemic delayed work on the project during the lockdown, but once work restarted over the summer, each week marked another milestone including the opening of the new George Square entrance and adjacent lift.

The new lift provides step-free access from street level up to the main concourse and down to the new basement area - home to the station's toilets including a 'Changing Places' facility, designed to support those passengers with complex care needs.

The redevelopment, which is being delivered by Network Rail and main contractor Balfour Beatty, is part of the Edinburgh Glasgow Improvement Programme (EGIP), a Scottish Government investment in the railway infrastructure across central Scotland.

Network Rail start £2.6m revamp of Balham station, making it fit for the 21st century

Work has started on a face-lift of Balham station which is due to end in Spring 2021 and will focus on improving several features of the station, including:

- Platform canopies - new sheeting will be installed
- Canopy gutter - new galvanised steel system will be added
- Platform tactile paving to be replaced with latest version

cold cast bronze reliefs - “Impressions of Balham” which depict local residents.

Paul Harwood, regional investment director for Network Rail, said: “The project at Balham station will bring a range of benefits to passengers and improve their travel experience. Station users can expect to see these works completed early next year, and they will also include vegetation clearance from the surrounding area and

Platform surface drainage system will be replaced with a brand-new system
Existing station drainage system will be replaced with an updated version

The station first opened in 1856 as Balham Hill and was actually situated on the west side of Balham High Road. It was re-sited in 1863 to its present location as part of works to widen the line and improve the route between East Croydon and London Victoria station. Further remodelling of the line was undertaken in 1890 and 1897 to increase capacity and after several name changes, reverted to Balham in 1969. Since then, the station has been developed throughout the years but these new upgrades will make it fit for the 21st Century.

The station also has a high brick wall along Balham Station road, on which are four

station cleaning. These improvements will ensure we can continue to provide a railway which meets the needs of passengers, well into the future.”

Chris Fowler, Customer Services Director for Southern and Gatwick Express, said: “On behalf of our customers, we welcome Network Rail’s wide-ranging renewal of station structures at Balham. Though some are unseen by passengers, all are important for their comfort and safety. We’ve refurbished the accessible toilet as part of our own network-wide, multimillion-pound station improvement programme, which will also provide new seating and a platform shelter here once the current work is complete. Throughout this work, our passengers can travel with confidence as we continue our stringent cleaning regime in stations and on trains.”

Network Rail bridge engineers plan major New Year project to keep Pompey well supported into 2021

Network Rail engineers are turning their attentions to the Portsmouth area in a busy January 2021 as one of the city’s most prominent Victorian railway structures gets some vital engineering attention. The 1876-built Landport Viaduct, which supports two platforms at Portsmouth and Southsea station on the line to the harbour, needs a week’s worth of strengthening, without trains running over it. In addition, a separate project will see new track laid and a bridge rebuilt near Cosham.

All this means some important dates and changes for passengers to have in their diaries:

Between Friday 1 and Sunday 3 January, plus Sunday 17 January, the line from Fareham to Portsmouth Harbour will be closed for the Cosham project. For one week, Between Monday 18 and Sunday 24 January, the line from Portsmouth & Southsea to Portsmouth Harbour will close, with the closure extended

Cosham and Bedhampton on Sunday 24, for Landport Viaduct strengthening. Passengers who travel on SWR, GWR and Southern services to and from Portsmouth stations are advised to plan ahead. Trains will start and finish their journeys earlier, some will call at additional stations or be diverted, while others will be replaced by buses.

Mark Killick, Network Rail Wessex route director, said: “We know any planned changes to train services can be disruptive to passengers, but both projects will provide a more reliable railway in Portsmouth. By doing this work all together, and especially the seven-day closure, we will save many more weekends of potential disruption. We’re proud to be the custodians of some very old Victorian structures, and one of the challenges we face is running a frequent and busy train service over the top of them, while keeping them in top condition. We really appreciate our passengers’ patience while

we do the work we need to keep them safe, and ask that they plan ahead and check the latest travel advice before beginning their journeys.”

Alan Penlington, SWR’s customer experience director, said: “Whilst there’s never a good time to close the railway, both bridge maintenance projects are essential for improving reliability and performance along this important stretch of railway. I realise these works will mean disruption for our customers; however, replacement buses will be in operation for both closures, and the longer closure will allow engineers the necessary time to strengthen Landport viaduct for years to come. I’d like to thank customers for their patience.”

Landport viaduct is supported by 17 spans with seven being strengthened during January’s line closure. The remaining 10 will be strengthened at a later date.

Work starts to restore iconic Ribblehead viaduct

Loco Fleet List Ten

This publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

Features:

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric & Bi-Mode Locos
- Eurotunnel Locomotives
- Unclassified Locomotives

Loco Fleet List Ten is available via mail order for just £12.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or using Paypal when visiting the Loco Fleet Shop website.

Web: www.locofleetshop.co.uk Email: lee@locofleetshop.co.uk

This special anniversary edition has undergone a complete rewrite to include scrappage dates, locations and allocations of all preserved and operational locomotives now in a perfect bound book

Work is under way to improve passenger and freight journeys over the world-renowned Ribblehead viaduct. The iconic North Yorkshire landmark is undergoing important maintenance to secure its future for decades to come. The 144-year-old viaduct will have its drainage improved and brickwork restored making journeys for passenger and freight trains more reliable on the stunning Settle-Carlisle railway. The £2.1m investment in the Grade II listed structure is part of the Great North Rail Project.

Ribblehead viaduct opened in 1876 bridging the gap between Ribblehead and Dent on the exposed and windy Batty Moor.

Work will take place between now and February 2021, including: brickwork repairs; removal of vegetation and repairing the damage caused by plants and weeds; upgrades to drainage across the viaduct's 24 arches; repainting metal and pipework

Phil James, North West route director at Network Rail, said: "It's a privilege to look after so many significant buildings and structures across the rail network, but Ribblehead viaduct has got to be one of the crown jewels of Victorian civil engineering. We know the structure is incredibly important both locally and internationally, and we want to give it the care and attention that it

deserves so it can be enjoyed by future generations of passengers and sightseers."

Engineers are in the process of installing scaffolding to provide a safe platform to carry out repairs to the 400m structure. Network Rail is working closely with Historic England and the Yorkshire Dales National Park to ensure the work is sympathetically carried out in line with guidance for historically significant structures.

Steve Hopkinson, regional director at Northern, said: "The viaduct is iconic and we're really proud to have such a magnificent piece of engineering on our network. It is also a vital and much-loved part of the hugely popular Settle-Carlisle line. The work being carried out will ensure future generations are able to enjoy one of the most beautiful rail journeys in the UK."

Paul Brown, chairman of the Friends of the Settle-Carlisle Line group, said: "This work has come about as a result of regular inspections of the Ribblehead viaduct. We work closely with Network Rail and welcome this investment in the line's future. The Ribblehead viaduct was once seen as the route's major weakness. It is now probably stronger than it was when the Victorians built it. This work is needed to keep it that way."

Rail industry in Wales investing in new technology for the autumn

Network Rail and Transport for Wales are using creative new technology and innovation to help keep rail services running this autumn. The autumn season is a challenging time for the rail industry throughout the UK as a result of poor weather conditions which can damage track and trains, reducing the number of services available.

By working closely in partnership since the start of the year, the two organisations have put a number of key plans in place to ensure customers can keep moving.

Amongst them are transport for Wales' Automated Intelligent Video Review cameras which sit on the front of trains and can map around a thousand miles of track in Wales in just four weeks. The data is fed to Network Rail to target problem areas earlier, reducing the risk of tree strikes, debris blocking lines, signals becoming obscured and wheel damage.

Network Rail are also using drones to help with this work and are treating tracks with a new plasma technology programme. PlasmaTrack is a new sustainable technology, that is being used to clean and sterilise track. Plasma is generated from high voltage and compressed gas to apply energy to the railhead which thermally removes contaminants such as oxidisation and leaf debris.

As well as this investment in new technology, TfW have stocked up on extra wheels for train repairs and Network Rail will have rapid response teams continually working on the track.

The work follows a successful autumn last year (2019) when TfW invested heavily in new Wheel Slide Protection on a quarter of their trains and as a result saw a 57% reduction in damage and trains in for repair.

Bill Kelly, Network Rail's Wales route director added: "Autumn is a challenging time for the whole rail industry but particularly here in Wales and Borders. We are seeing more storms and extreme weather than ever which can have a devastating effect on the railway and leads to delays for passengers. That is why Network Rail and our colleagues at Transport for Wales are working closer than ever to ensure we are well prepared for the autumn months ahead. We plan almost a year in advance for autumn and this includes constantly adapting the innovative technologies we use to make

sure we can keep passengers safe and moving throughout the season."

James Price, Transport for Wales CEO added: "The Autumn season is a difficult time for the rail industry throughout the UK because of poor weather conditions and the effect this can have on our railway tracks and our trains. We are working in partnership with our colleagues in Network Rail to ensure we're utilising the most up to date technology including new AIVR cameras on our trains as well as extra wheel replacements, to ensure that we're fully prepared this year.

Last year, through the fitment of Wheel Slide Protection on our trains, we saw a reduction of 57% in damage and trains in for repair. Climate change is heightening the weather risks and challenges on our industry and this further highlights the importance of our Sustainable Development Plan at TfW."

Anthony Smith, Chief Executive of the independent watchdog Transport Focus, said: "Staying safe will be the main concern for many rail passengers travelling this autumn, and reliability remains a top priority. People expect services to run on time, so it's important the railway can cope with any challenges the autumn season brings. We welcome this partnership and the use of new technologies that will help keep people moving, minimised delays and avoid crowding that makes social distancing difficult."

New £15m Kintore station welcomes first passengers

Kintore re-joined Scotland's Railway after an absence of 56 years on October 15th, with the opening of the town's new station. Providing an interchange between rail and road, the two-platform station is fully accessible with step-free access between platforms via a footbridge with lifts. Built by Network Rail and main contractor BAM Nuttall, the new station has extensive car parking – including disabled and electric charging bays – and bike storage. With 24 of the 168 parking spaces fitted with electric charging points, Kintore station is also now the largest electric vehicle charging place in the north east of Scotland. Connected to the local bus network the station also links into the Inverurie-Kintore cycle path. The new station will be served by up to 28 ScotRail trains each day – including refurbished high-speed InterCity trains. Customers will benefit from a half hourly service at peak times Monday to Saturday, and an hourly service on Sundays.

Funded by Transport Scotland, Aberdeenshire Council and Nestrans the new station reconnects Kintore to rail for the first time since 1964 when the original 1854-built station closed as part of the Beeching cuts.

Elements of the original station, including heritage benches and salvaged signs, have been reincorporated into the new facility. Reopening Kintore has been made possible by the recently completed Aberdeen-Inverness Improvement Project which doubled the track between Aberdeen and Inverurie – increasing capacity for new passenger and freight services on the route.

Kris Kinnear, Network Rail Scotland's capital delivery director, said: "We're committed to working alongside the Scottish Government to open up our railway to as many communities as possible across Scotland."

This station will create new social and economic opportunities for people in Kintore and we are pleased to have been able to deliver the new facility for the town.

The northeast's rail network has benefited from significant investment over the last five years to increase capacity and create more flexible journeys for passengers."

David Simpson, ScotRail operations director, said: "It's fantastic to see trains call at the station for the first time

in almost 60 years. Customers in Kintore can now benefit from a fast and frequent service to Aberdeen and Inverness, which will be transformational for the town and the surrounding area for years to come."

Nissar Mohammed, BAM Nuttall operations director rail, said: "The opening of Kintore Station is one of the final pieces of the jigsaw puzzle for Network Rail and BAM in our efforts to transform rail connectivity between Aberdeen and Inverness. Kintore Station offers local commuters the chance to travel in speed and comfort into Aberdeen in less than 20 minutes and onwards to the rest of the rail network."

Alongside our work to dual the line between Aberdeen and Inverurie, this new station is the culmination of over five years work to make rail the transport option of choice for people living and working in North East Scotland. I'm very proud of BAM and the rest of the 'Scotland's Railway' team and I know that rail customers will benefit from their work for years to come."

On October 8th, Class 67 023 and 67 027 pass through Swindon with a test train working. *Ken Mumford*

Bombardier signs three-year services contract extension for Arriva CrossCountry

SOUTHERN COUNTIES RAILWAY SOCIETY

A club for anyone interested in the railways of Southern England.

www.southerncountiesrailwaysociety.co.uk

Contract extension reflects strong, long-standing relationships with Arriva

Bombardier to maintain Voyager and Super Voyager fleet for Arriva CrossCountry mainline services until 2023

Global mobility solution provider Bombardier Transportation has announced that it has signed a three-year extension to its Train Services Agreement (TSA) with Arriva CrossCountry in the United Kingdom, with the option of a further extension of up to one year. Under the new agreement, which lasts until October 14th 2023, Bombardier will continue to maintain, overhaul, service and clean a fleet of 34 class 220 Voyagers and 24 class 221 Super Voyagers, owned by Beacon Rail at Bombardier's Central Rivers depot in Staffordshire and at outstations across the CrossCountry network which stretches from Aberdeen in Scotland to Penzance in Cornwall, UK.

The three-year contract extension is valued at £248 million (\$320 million US, €273 million euro).

Matt Byrne, President UK, Bombardier Transportation said, "We are delighted that we have reached agreement to maintain the Voyager and Super Voyager fleet for Arriva CrossCountry. This important contract extension is a reflection of our excellent relationship with Arriva, and the hard work and professionalism of our Central Rivers team who deliver day in, day out for Britain's vitally important CrossCountry network."

Maintenance, overhaul and cleaning of the class 220 and class 221 fleet will take place at Central Rivers depot, with heavy component maintenance taking place at Bombardier Crewe.

Tom Joyner, Managing Director, Arriva CrossCountry said, "We're really pleased to continue our relationship with Bombardier to maintain our Voyager and Super Voyager fleet. The Voyagers are a key part of our fleet, operating across the length and breadth of Great Britain. As a long-distance operator of choice, we have a vital role to play in strengthening our connections between our towns and cities and look forward to working closely with Bombardier to deliver to our customers."

Network Rail's 'open data' programme gets lift-off

Almost 1,500 lifts and 300 escalators across some 500 stations around the country will soon be directly 'live' reporting their working condition. Passengers will be able to see which lifts and escalators are working, helping them plan their journeys through stations with real-time knowledge of the access available.

Network Rail is releasing an open data source with live data on the status of lifts and escalators at around 370 stations nationwide, building up to the full complement of 463 stations over the next 12 to 18 months.

Speaking about the development Martin Frobisher, Network Rail's technical and engineering director, said: "Putting passengers first is at the heart of everything we do and with our greater use of technology and remote condition monitoring of thousands of our assets, we can leverage the brilliance of our UK based app developers to turn this data into something really useful for our passengers, especially those with accessibility needs.

"And with the continuing 'Access for All' programme, we are aiming to double the number of stations with lifts on the network over the next 10 years, helping more and more passengers to easily access Britain's railway."

Previous open source data releases have quickly resulted in app and web developers using the information to create easy to use apps that are hugely beneficial to passengers when planning journeys.

This latest development, delivered through Network Rail's research and development programme, uses monitoring devices on lifts and escalators to create an 'application programming interface' which gives live asset condition to third parties through an open data source. This allows the third parties, such as web and app developers, to create travel planner apps to provide live lift and escalator availability information to passengers.

The data comes from monitoring kit that provides constant condition information on Network Rail's lift and escalator assets. Currently 80% of lifts and 60% of escalators are fitted with this equipment with the remaining sites to be installed over the next 12-18 months.

Network Rail will be making the information available for passengers on its own website in the next few months. Working together with the Rail Delivery Group, plans are also in place to incorporate the information into the National Rail Enquiries website. This contributes to the new rail technical strategy launched on October 13th, using technology to make the railway easy to use for all, reliable and easy to maintain.

Network Rail spending with SMEs exceeds £2.5bn in 2019-20

Britain's railway network is critical to the nation's success as it supports and sustains economic growth and, in the light of Coronavirus, also its recovery. The railway connects workers to jobs, businesses to markets, and people to their families and friends. It also carries goods worth over £30 billion each year, bringing food to shops, building materials to construction sites, and fuel to power stations. Even for those who never use a train, the railway makes everyday life possible.

In the 2019-2020 financial year, Network Rail spent 35.6 per cent of its total £7.1 billion expenditure with small and medium-sized enterprises (SMEs), exceeding the government target of 33 per cent of annual expenditure to be spent with SMEs by 2022. In real terms, this equates to a total of £2.52 billion and is the first time Network Rail has exceeded £2.5 billion in a single financial year.

Rise in SMEs working directly with Network Rail

The number of suppliers contracted directly by Network Rail was 4,246 in the 2019-2020 financial year, of which 3,051 (71.9 per cent) were SMEs, reflecting an increase of 440 more SMEs than in 2017-18 (2,611).

Network Rail's direct spend with SMEs increased more than five per cent from 12.77 per cent in 2017-18 to 17.8 per cent in 2019-20.

Clive Berrington, Network Rail commercial and procurement director, said: "Our extensive supply chain network plays a vital part in helping us run a safe and efficient railway and accelerate innovation to make Britain's railway even better for passengers and freight users.

We have focused a lot in the past two years to ensure Network Rail is more accessible to the SME market. We now work directly with over 3,000 SMEs, ranging from technology companies that design innovative solutions to keep the railway running safely to catering companies that replenish our teams working through the night.

Since establishing our SME action plan in 2019, we have also launched several initiatives to make Network Rail 'easier to do business with' and these results demonstrate we are on the right track. We have developed initiatives to make us more dependable and easier to work with by working smarter with our supply chain and involving them earlier in the planning phase to help us deliver work more efficiently. These initiatives include improved contracting strategies."

Rail Minister, Chris Heaton-Harris, said: "More than ever it is vitally important that we support smaller businesses right across the country. I'm delighted that Network Rail has gone above and beyond the targets we set them, supporting jobs and smaller businesses from engineering to the service industry. Our railways have long been the lifeblood of this country and supporting thousands of smaller businesses only adds to that."

Indirect SME spend also increased

A survey of Network Rail's top 100 (by spend) tier 1 suppliers found that indirect spend with SMEs rose to 17.8 per cent in 2019-20 (an increase of 3.8 per cent from 2017-18).

Did you Know - Ken Mumford

Some more of the nations oddities this month:

Central Wales Line

The LNWR developed local passenger services in the Swansea area - to the north of Swansea the railway attracted more industries. which required manpower, and the men and their families needed a means of transport.

The "Three Wells" [the spa towns of Llandrindod, Llangammarch and Llanwrtyd] were served directly by the Central Wales Line - and the not-too-distant Builth Wells all proposed after the coming of the railway.

One of the daily through good traffic was the overnight beer train worked through from Burton-on-Trent with the 'empties' using the Central Wales Line for the return journey. At Swansea, the beer was stored under the arches adjacent to Swansea (Victoria) station!

Just after WW2, the GWR proposed a plan which included allowing trains from the Central Wales line to be diverted from Swansea Victoria station to the High Street one but it was not implemented.

'A County for the Cost of a Coffee' Covenantor scheme launched

THE Churchward County Trust – the group building GWR 4-4-0 No. 3840 'County of Montgomery' at Tyseley Locomotive Works – is looking to build on current momentum and maintain its present rate of progress with the launch of a monthly Covenantor scheme that will hopefully attract a steady flow of smaller donations over a longer period.

The 'County for the Cost of a Coffee' scheme is seeking donors to make small, regular donations – the equivalent of a high street cup of coffee a week – over a fixed but sustained period. By regularly donating from as little as £10 per month (£2.50 a week), the CCT will be able to better forecast a regular income stream, which in turn will greatly aid its forward planning.

There are three donation options open, which have the following benefits associated to them:

£10 per month for a minimum of 60 months – donors receive membership of the CCT, a CCT mug, an invitation to No. 3840's official launch event and tickets for one of No. 3840's first trains.

£25 per month for a minimum of 60 months – donors receive membership of the CCT, a CCT mug, an invitation to No. 3840's official launch event, tickets for one of No. 3840's first trains and a footplate trip on the locomotive.

£50 per month for a minimum of 60 months – donors receive membership of the CCT, a CCT mug, an invitation to No. 3840's official launch event, tickets for No. 3840's first train and an opportunity to drive the locomotive.

Anyone donating over £1,000 will have their name recorded on the Roll of Honour.

CCT Chairman Gary Boyd-Hope said: "Coffee shops are big business in the UK and have become familiar fixtures on the high street, while takeaway coffee machines can be found in supermarkets and petrol stations the length and breadth of the country. A typical medium sized Caffe Latte or Cappuccino costs around £2.65, and thousands upon thousands of cups are sold each week.

"Yet imagine what could be achieved if the price of just one of those regular weekly coffees was transformed into a regular donation instead. Such schemes have

been employed by other loco groups with great success, and we hope that by making smaller donations this way, supporters can help the project without really noticing it. Plus they'll get a mug to drink their coffee in!" Details on how to become a Covenantor can be found on the CCT website at www.churchwardcounty.org.uk/a-county-for-the-cost-of-a-coffee/

Ex-Tyseley Loco Works CME Bob Meanley joins 'County' 4-4-0 engineering team

The Churchward County Trust is delighted to announce that former Tyseley Locomotive Works Chief Engineer and doyen of GWR locomotive matters, Bob Meanley, has joined the County of Montgomery project as its Engineering Manager.

Bob is regarded as one of the most well-respected locomotive engineers of the preservation era, with a wealth of practical experience and technical knowledge to his name. His hands-on involvement started in the 1960s with 'Princess Royal' Pacific No. 6201 Princess Elizabeth, during the period when it was based at Ashchurch following purchase from BR. He was also heavily involved with the restoration and return to steam

of several of the National Railway Museum's locomotives including 'D11' 4-4-0 No. 506 Butler-Henderson, Maunsell 4-6-0 No. 850 Lord Nelson, 'A4' Pacific Mallard, and the incomparable Stirling Single No 1.

During the late 1970s Bob was in charge of the main line operation of 'Jubilee' No. 5690 Leander, but it was his work with the Birmingham Railway Museum, and guiding the development of Tyseley Locomotive Works (TLW), that cemented his reputation as one of the best in the business.

During almost 25 years as Chief Engineer, Bob led TLW to become a thriving centre of engineering excellence. He oversaw the restoration and operation of much of the Tyseley steam fleet including 'Castle' Nos. 5043 'Earl of Mount Edgumbe' and 7029 'Clun Castle', travelling far and wide with them over the national network on railtour duties with the Vintage Trains operation, which he also managed for almost 20 years until its transition to a licenced operator. He also oversaw the restoration of 'Hall' No. 4965 'Rood Ashton Hall', which was carried out by a team of 20-year-old TLW volunteers led by his son, Alastair.

Furthermore, Bob was also responsible for the re-streamlining of 'Princess Coronation' Pacific No. 6229 'Duchess of Hamilton' for the National Railway Museum, building the frames for new-build 'A1' No. 60163 'Tornado', and repairing and overhauling countless other locomotives as part of Tyseley's contract engineering business.

More recently, after handing the Tyseley reins to Alastair in 2018, Bob served as Acting CME and Engineering Director at the West Somerset Railway, but stepped down in July of this year.

Commenting on the appointment, CCT Chairman Gary Boyd-Hope said: "We knew right from the very start of this project that we wanted County of Montgomery's bottom-end to be built at Tyseley, and that was primarily because of Bob and Alastair Meanley. There are few steam engineers as well versed on GWR locomotives as Bob is, and the reputation of the Tyseley fleet only served to reinforce our decision.

"Bob has previously given us the benefit of his vast experience and knowledge prior to joining the team, but having him as our Engineering Manager will make a huge difference to our progress going forward. I am delighted that he has agreed to join us, and look forward to working with him as Tyseley erects No. 3840's frames in the coming months."

Work on the assembly of County of Montgomery's frames continues at TLW. The workshop is currently preparing various angle iron components to allow the frames to be assembled, as well as fitting the hornblocks to the frame plates. The next step will be to align the frames correctly and rivet them together. TLW has also been contracted to build the locomotive's welded dragbox, which will then be fitted to the frames.

NEW 'STEAM AND LIGHTS' TRAINS TO BE CORONAVIRUS SAFE PRE-CHRISTMAS FIRST FOR SWANAGE RAILWAY

A new and evocative Coronavirus safe 'Steam and Lights' festive train service is to operate on the Swanage Railway during the run-up to Christmas – in a first for the award-winning heritage line.

Operating on ten selected days, with two evening trains a day, the new service replaces the traditional 'Santa Specials' which cannot operate because of the measures that need to be taken to counter the spread of Covid-19.

Instead of Father Christmas handing out presents to children on the steam train, the new pre-booked service during December – which has assigned socially distanced seats – will see trains covered in brightly coloured lights steam through the Isle of Purbeck in the dark of the evening.

There will also be special lighting displays at stations, as well as at other locations along the five and a half mile heritage line, as the steam train runs from Swanage to Corfe Castle and Norden on the one-hour return trip.

The interiors of the cosy steam-heated carriages will also be festively decorated for the one-hour round trip which will see on-board music synchronised to lineside lighting displays passing the carriage windows.

Before passengers board the 'Steam and Lights' train at Swanage station for their magical journey, there will be a dramatic switch-on of the train lights at the platform. Swanage station will only be open to 'Steam and Lights' train passengers while Herston Halt, Harman's Cross, Corfe Castle and Norden stations will be closed to the public.

The Swanage Railway volunteer Commercial Director Steve Williams said: "This new 'Steam and Lights' train service in the run-up to Christmas is a festive first for the Swanage Railway and we are very excited because it will be very special and out of this world – colourful, evocative and dramatic. We are looking forward to it tremendously.

"The need to keep our passengers and staff safe against the threat of Covid-19 – by following social distancing and the wearing of face coverings – means that we cannot run our traditional, and very popular, Santa Special trains where Father Christmas gives presents to children on the train and has his photograph taken.

"With the help of an experienced and reputable company specialising in synchronised lighting and music, we have been working very hard to design a special festive train service that will make wonderful and magical memories for children and adults in the run-up to Christmas," added Steve.

The special 'Steam and Lights' trains operate on the first two weekends of December and then daily from Friday, 18 to Wednesday, 23 December, 2020, inclusive, with departures from Swanage station at 5.15pm and 7.15pm.

Steve explained: "At the time of booking, passengers can purchase a special festive picnic box filled with tasty treats and drinks to make their 'Steam and Lights' journey extra special.

"A memorable experience suitable for all ages, stations and key points along the line will be specially lit as the 'Steam and Lights' train passes through in the dark. On board the train, there will be festive music synchronised to the lighting displays passing the carriage windows as well as an informative on-train commentary.

"With allocated socially distanced seating, the 'Steam and Lights' trains must be booked in advance and can only be joined at Swanage station where the brightly lit festive trains start and end their journeys.

"To comply with Government health regulations, no bookings can be taken for groups comprising more than six people and face coverings should be worn on the platform at Swanage station as well as on the 'Steam and Lights' train," added Steve.

A socially distanced Swanage station shop will also be open when the 'Steam and Lights' trains are running, subject to volunteer availability, but there will be no catering available at Swanage station, or on the special festive trains, because of the need to keep passengers and staff safe against the threat of Covid-19.

The Swanage Railway uses the Zoono long-life anti-bacterial spray – proven to kill the Coronavirus – on its trains and stations, to keep passengers and staff safe, while the trains are cleaned and tables wiped after every round trip.

Tickets for the 'Steam and Lights' trains are £20 each for passengers aged 15 and above, £15 for children aged three to 15 and free for children aged under three if they sit on an adult lap and do not occupy a seat.

There is a maximum of six people per booking.

SWANAGE RAILWAY RECEIVES SUBSTANTIAL GRANT FROM THE GOVERNMENT'S £1.57 BILLION CULTURE RECOVERY FUND

Almost 450 heritage organisations in England – including the Swanage Railway – have been awarded cash from the first round of the Culture Recovery Fund for Heritage.

Grants of up to £1 million will deliver a lifeline for the heritage sector in England with further support to follow and larger grants for capital projects awarded through the Heritage Stimulus Fund.

First major tranche of funding from the Government's £1.57 billion Culture Recovery Fund.

The Swanage Railway is one of 445 heritage organisations across the country set to receive a life-saving financial boost from the Government – thanks to the £1.57 billion Culture Recovery Fund to help them through the Coronavirus pandemic. A total of 445 organisations will share £103 million – including the Swanage Railway – to help restart vital work and maintenance on cherished heritage sites, keeping venues open and supporting those working in the sector. The Swanage Railway will receive £223,200 which will allow the award-winning heritage line to improve its systems and support Covid-19 requirements in the following ways:

- Upgrade its passenger reservations system which has experienced challenges in coping with the additional passenger information needed for Covid-19 track and trace.
- Keep its stations and carriage stock sanitised to Covid-19 requirements.
- Improve its information screens at Swanage and Corfe Castle stations.
- Install information screens at Harman's Cross and Norden stations.
- Continue the provision of personal protection equipment (PPE) for staff and volunteers.
- Provide further seating dividers in carriages where required.
- Enable Equalities Act training for staff and volunteers.

This vital funding is from the Culture Recovery Fund for Heritage and the Heritage Stimulus Fund which is funded by the Government and administered, at arm's length, by Historic England and the National Lottery Heritage Fund.

Both funds are part of the Government's £1.57 billion Culture Recovery Fund which is designed to secure the future of Britain's museums, galleries, theatres, independent cinemas, heritage sites and music venues with emergency grants and loans. A total of 433 organisations will receive a share of £67 million from the Culture Recovery Fund for Heritage to help with costs for operating, reopening and recovery. This includes famous heritage sites across the country, from Wentworth Woodhouse in Yorkshire to Blackpool's Winter Gardens, Blyth Tall Ship to the Severn Valley Railway, the International Bomber Command Centre in Lincolnshire to the Piecehall in Halifax. The funds will save sites that are a source of pride for communities across the country. A total of 12 organisations, including English Heritage, Landmark Trust, Historic Royal Palaces and the Canal and River Trust, will receive £34 million from the Heritage Stimulus Fund to restart construction and maintenance on cherished heritage sites to preserve visitor attractions and protect livelihoods for some of the most vulnerable heritage specialists and contractors in the sector. The Architectural Heritage Fund (AHF) has also been awarded a grant from the Culture Recovery Fund through Historic England. The AHF will use the funding to support charities and social enterprises occupying historic buildings to develop new business plans and strategies for organisations affected by the pandemic.

Culture Secretary Oliver Dowden said: "As a nation, it is essential that we preserve our heritage and celebrate and learn from our past. This massive support package will protect our shared heritage for future generations, save jobs and help us prepare for a cultural bounceback post Covid."

Lucy Worsley, Chief Curator, Historic Royal Palaces, said: "There's no truer way to experience the past than to walk in the footsteps of those who have lived it – that's why preserving our built heritage is so important. At Historic Royal Palaces, we care for six nationally significant buildings, opening them to the public and preserving them for future generations. Sadly, the pandemic meant that we had to stop some of our critical conservation work. The grant we have received from the Culture Recovery Fund will enable this work to resume – so we can give some of Britain's most historic buildings the care and attention they deserve, while supporting the

specialist craftspeople who are vital for the future of our national heritage. We are enormously grateful to the Government for this support."

Randy Coldham, the Swanage Railway's fund-raising chairman, said: "This grant is integral to the future success of the Swanage Railway by providing financial assistance to improve our systems, and support our training and Covid-19 responsibilities. It does not negate the importance of our SOS Appeal which supports the day to day running of our railway through this coming winter.

Duncan Wilson, Historic England's Chief Executive, said: "It is heartening to see grants, both large and small, from the Government's Culture Recovery Fund helping heritage sites and organisations across the country which have been hit hard by the effects of Covid-19. These grants range from giving skilled craft workers the chance to keep their trades alive to helping heritage organisations pay the bills, and to kick-starting repair works at our best-loved historic sites. The funding is an essential lifeline for our heritage and the people who work tirelessly to conserve it for us all, so that we can hand it on to future generations."

Ros Kerslake, Chief Executive of the National Lottery Heritage Fund, said: "It is absolutely right that investing in heritage should be a priority during this crisis and this support by Government is crucial. Heritage creates jobs and economic prosperity, is a major driver for tourism and makes our towns, cities, and rural areas better places to live. All of this is so important for our wellbeing and will be particularly vital when we start to emerge from this incredibly difficult time. Our heritage is still facing a perilous future – we are not out of the woods yet. But this hugely welcome funding from Government, and the money we continue to invest from the National Lottery, has undoubtedly stopped heritage and the organisations that care for it being permanently lost."

Kate Mavor, Chief Executive of English Heritage, said: "This support for our nation's heritage is fantastic news. Over the last few months, our teams have been working hard to welcome visitors back safely to the great castles, stone circles, abbeys and historic houses in our care. This funding will help us invest to safeguard the historic fabric of these much-loved places, which everyone can learn from and enjoy."
