From the Editor...

Welcome to Issue 110 and your monthly roundup of photos from across the UK.

Well that's it! November is here, the RHTT season is well on its way, we have poppy fitted unit's, a poppy liveried HST power car, and quite a few moustache fitted Northern units for Movember! I always like TOC's getting involved with good causes, and whilst those vinyl's can only cost a few pounds, the meaning can be so much more for both passengers and staff.

While on the subject of TOCs, I must praise the work of the social media teams, who work faultlessly helping customers with a number of queries and even some (dare I say it) complaints. In many ways these guys (and girls) are the first point of contact and often have to deal with problems that aren't their fault, such as missing property or delays caused by other services. So if you are one of these fantastic people, I personally say, you're a credit to the industry and thank you.

Moving on, I hope everyone has a brilliant month and please keep those photos coming.....

Andy

Once again many thanks to the many people who have contributed, it really makes our task of putting this magazine together a joy when we see so many great photos. These issues wouldn't be possible without: Michael J Alderdice, Steve Andrews, John Alsop, John Balaam, Geoff Barton, Robert Bates, Brian Battersby, Paul Beard, Sam Bilner, Matthew Bird, Tim Bott, Amy Bucki, Ben Bucki, Keith Chapman, Pete Cheshire, Nick Clemson, Keith Davies, Neil Davies, Steve Donald, Robert Duff, Derek Elston, Eddie Emmott, Dave Felton, Paul Godding, Carl Grocott, Richard Hargreaves, Dave Harris, Martin Hart, Brian Hewertson, Darrel Hendrie, Paul Hewertson, Stuart Hillis, Keith Hookham, Derek Hopkins, Colin Irwin, Jon Jebb, John Johnson, Richard Jones, Ken Livermore, Michael Lovatt, Michael Lynam, Jonathan McGurk, Peter Marsden, Phil Martin, David Mead, Chris Morrison, Ken Mumford, Gerald Nicholl, Jeff Nicholls, Andy Parkinson, James Passant, Mark Pichowicz, Colin Pidgeon, Neil Pugh, Tim Richardson, Charlie Robbins, Neil Scarlett, Mike Sheridan, Stephen Simpson, Stewart Smith, Chris Stanley, Steve Stepney, Steve Thompson, Tim Ward, Andrew Wilson, Shep Woolley and the guys at RailUK.

Front Cover: Class 73 141 'Charlotte' leads 73 119 'Borough of Eastleigh' through Tonbridge against a heavy looking sky on this early morning RHTT working, October 20th.

This Page: West Country Bullied Class 4-6-2 No. 34092 'Wells' pilots BR Standard Class 4MT 2-6-0 No. 76079 away from Grosmont with a Pickering service. [Shep Woolley](#)

Charter Scene:

Vintage Trains - The Coastal Explorer

Prior to hot box problems at Carlisle, GWR 4073 Class 4-6-0 No. 5043 'Earl of Mount Edgcumbe' is seen in full flight on the climb to Shap summit with 'The Coastal Explorer' raitour on September 19th. [Shep Woolley](#)

West Coast Railway Co. - Settle & Carlisle

Following the cancellation of 'The Tynesider' tour on October 3rd, by Railway Touring Company, West Coast ran this tour in its path. Here LMS Class 5MT 4-6-0 No. 45231 passes Cononley working from Cleethorpes to Carlisle. [Colin Irwin](#)

West Coast Railway Co. - Settle & Carlisle

LMS Class 5MT 4-6-0 No. 45231 heads through the fog at Long Preston, heading towards Carlisle, October 3rd. [Colin Irwin](#)

West Coast Railway Co. - Settle & Carlisle

West Coast's Class 47 746 (with 47 760 on the rear) calls at Scunthorpe on October 3rd working the return Carlisle - Cleethorpes charter. [Steve Thompson](#)

PMR Tours - THE NORTHEASTERN

LMS Princess Coronation Class 4-6-2 No 46233 'Duchess of Sutherland' working the 1Z32 05:32 Sheffield to Newcastle, passes Burton Salmon on October 17th.

Colin Irwin

PMR Tours - THE NORTHEASTERN

LMS Princess Coronation Class 4-6-2 No. 46233 'Duchess of Sutherland' is seen departing Newcastle with the return working to Derby, October 17th. [Colin Irwin](#)

PMR Tours - THE NORTHEASTERN

LMS Princess Coronation Class 4-6-2 No. 46233 'Duchess of Sutherland' stands at Pontefract Baghill taking water, with the return working to Derby. [Colin Irwin](#)

Steam Dreams - The Lakes Express

LMS Coronation Pacific No. 46233 'Duchess of Sutherland' hurries the Steam Dreams organised Lakes Express on day 1 of the 4 day tour through Wolverton Station, September 14th. [Andy Pratt](#)

Steam Dreams - The Cathedrals Express

Right: Class 47 760 is seen on the rear of 1Z82 06:30 Warminster to Ely as it passes through Ealing Broadway on October 10th. [Derek Elston](#)

Main: LNER B1 No. 61306 'Mayflower' leads 'The Cathedrals Express' 1Z82 06:30 Warminster to Ely through Ealing Broadway on October 10th. [Derek Elston](#)

Railway Touring Company - THE CUMBRIAN MOUNTAIN EXPRESS

LMS 5XP Class 4-6-0 No. 45699 'Galatea' is seen at the site of the old Scout Green Signal Box with the northbound 'Cumbrian Mountain Express' on October 17th.
[Shep Woolley](#)

Railway Touring Company - THE CUMBRIAN MOUNTAIN EXPRESS

LMS 5XP Class 4-6-0 No. 45699 'Galatea' drifts through Helwith Bridge with the returning 'Cumbrian Mountain Express' on October 17th. [Shep Woolley](#)

Railway Touring Company - THE CUMBRIAN MOUNTAIN EXPRESS

On October 17th, after just over a year absent from the mainline with wheel set problems, Class 86 259 was back in action on 'The Cumbrian Mountain Express'. Here she is pictured being looped at Milton Keynes working 1Z87 Carlisle to London Euston, taking over from steam traction at Farrington Jct. [Matthew Bird](#)

West Coast Railway Company - THE LUNE RIVERS TRUST SPECIAL

On October 3rd, LMS Jubilee Class 6P 4-6-0 No. 45699 'Galatea' passes Cononley heading from Carnforth to York. [Colin Irwin](#)

West Coast Railway Company - THE LUNE RIVERS TRUST SPECIAL

LMS Jubilee Class 6P 4-6-0 No. 45699 'Galatea' departs Skipton, heading to Hellifield with the return working, October 3rd. [Colin Irwin](#)

Great UK Railtours - The Conwy Valley Explorer

Class 47 802 stands in Blaenau Ffestiniog station at the head of 'The Conwy Valley Explorer' on October 10th, having arrived from Hereford. Arriva Trains Wales' Class 150 236 stands in the background. [Neil Pugh](#)

UK Railtours - THE SILVER JUBILEE TALISMAN

Looking splendid in the morning sun, LNER A1 No. 60163 'Tornado' passes Frinkley Lane, Marston with 'The Silver Jubilee Talisman' special (London Kings Cross to Newcastle) on September 26th. [Steve Donald](#)

West Coast Railway Co. - The Scarborough Spa Express

A horrible, murky morning at Church Fenton on October 29th, sees the passage of LMS Jubilee Class 6P 4-6-0 No. 45699 "Galatea" working 'The Scarborough Spa Express'. Having gone by way of Wakefield and Castleford, the train is heading back to York, prior to striking out for the coast. [Steve Thompson](#)

Steam Dreams - The Cathedrals Express

On September 27th, 'The Cathedrals Express' was hauled throughout by Class 47 760 due to gauging issues with the booked loco, GWR 4900 Class No. 4936 'Kinlet Hall'. *(The classic shot approaching Teignmouth will have to wait for another year)*
Stewart Smith

Railway Touring Company - The Hadrian

LMS 5XP Class 4-6-0 No. 45690 'Leander' puts on a real show as it works 'The Hadrian' over the magnificent Ribbleshead Viaduct en-route to Carlisle on October 10th. [Shep Woolley](#)

GWR - The First Devon and Exeter Explorer HST Special

Right: On October 10th, power car No. 43188 stands at Heathfield whilst working the Buckfastleigh to Buckfastleigh leg of this charity tour which originated at London Paddington. [Steve Andrews](#)

Main: Power car No. 43187 makes a visit to the South Devon Railway on October 10th, heading alongside the river at Dartington. [Steve Andrews](#)

UK Railtours - The Magnificant Settle & Carlisle

On October 3rd, Class 55 No. D9009 'Alycidon' roars up Helwith Bridge, heading for Carlisle having taken over from a Class 90 at Doncaster. [Colin Irwin](#)

Class 90 037 is seen stalled in Doncaster after arriving with the tour from London Kings Cross on October 3rd. [Brian Hewertson](#)

Having taken over from the Class 90 in Doncaster Yard, Class 55 No. D9009 enters Doncaster station with the outward working to Carlisle. [Steve Thompson](#)

Railway Touring Company - THE ROYAL DUCHY

BR Standard Class 7 No. 70000 'Britannia' heads the Bristol - Par charter past Dawlish Warren on September 6th. [Phil Martin](#)

Belmond - Northern Belle

On October 9th, Class 57 305 'Northern Princess' and 57 312 'Solway Princess' top'n'tail the 1Z40 Coventry - York through Burton on Trent. [Stuart Hillis](#)

ECS and Light Engine Moves

On October 9th, LMS 5XP Class 4-6-0 No. 45699 'Galatea' climbs away from Carnforth during its light engine move to York to haul the following day's 'Scarborough Spa Express'. [Shep Woolley](#)

ECS and Light Engine Moves

Sauntering through Lancaster on October 11th, on double ambers, LMS 5XP Class 4-6-0 No. 45690 'Leander' pilots LMS 5XP Class 4-6-0 No. 45699 'Galatea' after their exploits on 'The Hadrian' and 'Scarborough Spa' railtours. [Shep Woolley](#)

West Coast's Class 57 315 (with 57 316 on the rear) passes Hadnall working the 5Z55 10:00 Carnforth - Bristol Kingsland Road ECS working on October 8th.

[Keith Davies](#)

West Coast's Class 37 668 hauls the 5V42 Carnforth - Southall ECS through Red Bank on October 8th. [Dave Harris](#)

ECS and Light Engine Moves

LMS Jubilee Class 4-6-0s Nos. 45690 'Leander' and 45699 'Galatea' breeze up Hoghton Bank on a repositioning move from York to Carnforth on October 11th after heading specials the previous day. This was a rare (if not unique) appearance of two Jubilees working together on the mainline in preservation. [Gerald Nicholl](#)

ECS and Light Engine Moves

On October 13th, West Coast's Class 37 668 (with 47 786 on the rear) works a Southall to Carnforth ECS through Wigan North Western. [Brian Hewertson](#)

On October 4th, Class 52 No. D1015 'Western Champion' hauls Class 55 019 'Royal Highland Fusilier' through Burton on Trent, running as 0Z76 Severn Valley Railway - Barrow Hill. [Stuart Hillis](#)

West Coast's Class 57 315 (with 57 316 on the rear) drifts into Warrington Bank Quay on October 12th working the 5Z59 Bristol to Carnforth ECS. [Jeff Nicholls](#)

On October 1st, West Coast's Class 57 316 and 57 315 top'n'tail the 5Z18 Carnforth Steamtown - Hitchin ECS through Doncaster. [Michael Lynam](#)

ECS and Light Engine Moves

On October 10th, LMS Jubilee Class 4-6-0 No. 45690 'Leander' and No. 45699 'Galatea' pass Accrington working 5Z49 11:35 York NRM to Carnforth. [Colin Irwin](#)

Pictures:

Arriva Trains Wales

Right: DVT No. 82306 (with Class 67 001 on the rear) heads past Meole Brace with the 5Z91 10:55 Crewe H.S. - Cardiff Canton Sidings on October 9th. [Keith Davies](#)

Main: Class 67 014 with the 1D34 09:50 Manchester - Holyhead service, crosses Frodsham Viaduct on October 2nd. [Nick Clemson](#)

Chiltern Railways

Central line '1992' stock No. 91077 is seen departing North Acton station on October 17th. [Class47](#)

Fares Advice *with RailUK*

This month more questions and answers on the complex ticketing system of Britain's Railways.

Arriva Trains Wales Club 55 Deal is back on.

From Monday 19 October 2015, the ATW Club 55 deal is back on for most of the winter but excludes most of the time around Christmas. Cost is £23 return with a supplement of £5 if you travel on Fridays. See Full Terms & Conditions: <http://www.arrivatrainswales.co.uk/Club55/Buy/>

One for ticketing geniuses

Q: Travelling from Sunningdale to Potters bar. Using a 16-25 railcard, and needing a return ticket, returning after evening peak times. So, going to take the 0910 service from SNG with an off-peak return ticket with the railcard, meaning as its before 10am, the £12 minimum fare is necessary. So, an off-peak return is £12 (£18.10 without railcard). BUT, if i was to take the same train from Ascot, which is one station further away from Waterloo than Sunningdale, the same ticket will cost me £16. (£24.20 without railcard)

My question - why the hell is it is such a difference in price between Sunningdale and Ascot, £4 with railcard, £6.10 without (An anytime single from Ascot to Sunningdale is £2.70) so, why isn't the difference in price, £2.70 rather than £6.10.

A: *Because the TOC can! By the way, the Sunningdale ticket is valid for travel via Reading to London, so in the know passengers starting from Ascot could buy the Sunningdale ticket and start short, making a useful saving. Ascot is*

an associated routeing point for Sunningdale. Whether it is appropriate or not depends on the fares check, made using NFM64 fares, which were:

Sunningdale to Potters Bar: CDS £7.70; SDS £11.10, Ascot to Potters Bar: CDS £8.80 ;SDS £11.00

As the fare (SDS = Standard Day Single as it was then) from Ascot to Potters Bar is less than or equal to that from Sunningdale, Ascot passes the fares check and can be used as an origin routeing point. Travel from Ascot to Alexandra Palace (the destination routeing point for Potters Bar) is then permitted on map combination WX+RG+KE. I don't agree with the interpretation of the ATOC/iBlocks routeing point calculator at http://data.atoc.org/rp_calc which says that Ascot isn't an appropriate origin routeing point without considering easements - I think it is seeing that the CDS fare is more expensive and thus failing at that point.

I don't think this is the correct interpretation and I don't think it is how the NRE/Silverrail journey planner is applying the fares check either. In any case, even if Ascot did fail the fares check, easement 300387 appears to allow it: Customers travelling from Egham, Virginia Water, Longcross and Sunningdale via Wokingham may travel via Ascot. This easement applies in both directions.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

On October 14th, Ribble Rail's Sentinel shunter 'Enterprise' crosses the swing bridge with oil tanks for Totals Bitumen plant Preston, having arrived as the 6M32 from Lindsey oil refinery.

ScotRail Alliance Winter Roadshow

Transport Minister Derek Mackay, joined DRS onboard the 'Winter Development Train' operated on behalf of network Rail, into Glasgow Station recently for the launch of ScotRail Alliance's winter roadshow.

Visitors to the roadshow were able to view films and visit display stands providing an insight into how ScotRail and DRS prepare for and react to severe weather.

Mike Dalgleish, Business Manager for DRS said: "DRS were delighted to join the launch of ScotRail's roadshow. The planning that goes into these operations is phenomenal for all parties. DRS have a dedicated team and a round the clock control desk that provides superb 24/7 performance. We carry out a number of seasonal works from weed spraying during spring and summer to leaf clearing throughout autumn. The 'Winter Development Train' is just one of the specialised units that is used to melt snow and ice on the

track. We also have snow ploughs stabled all over the UK ready to be deployed and traincrew on standby ensuring we can quickly react when severe weather hits. Effective management built around a highly experienced and skilled team ensures that the network remains operational during these challenging months providing minimum disruption for both passengers and freight".

Minister for Transport and Islands, Derek Mackay said: "We

never know what the winter will bring and we have been planning extensively with the ScotRail Alliance over recent months to deliver improvements in operational response, customer services and travel advice that will ensure that rail passengers are able to plan and undertake their journeys wherever possible. I am confident that this year our rail network is more prepared than ever, with additional winter maintenance equipment at depots, and deployment of the snow and ice treatment train will keep our rail network moving during periods of extremely cold weather".

David Dickson, Infrastructure Director for the ScotRail Alliance, added: "We are working closely with the government to make sure we deliver as robust a service as possible this winter. We have invested heavily in recent years in new equipment to keep our infrastructure open during periods of prolonged cold and have also developed a range of facilities to help keep trains running in freezing conditions. We are confident that the Scottish rail network will be as well prepared as possible for another severe winter."

GB Railfreight runs first train for Drax from the Port of Liverpool

On October 26th, GB Railfreight ran its first train for Drax Power from the Port of Liverpool to the company's Power Station in Selby, North Yorkshire, transporting 1,600 tonnes of biomass pellets.

Using locomotive 59003 at the front and 66706 at the rear (6F27), and 25 of Drax Power's biomass hopper wagons, the train left the Port of Liverpool at 17:25. It was hauled to Tuebrook sidings in Liverpool, where the Class 59 was detached and the Class 66 (6E27) used to haul the train to Drax Power Station, arriving at 0159 on Tuesday, 27th October.

The Port of Liverpool is a loading location included on GBRf's contract for hook and haul services with Drax Power. GBRf currently runs two sets of Drax wagons.

This operation represents the start of Phase 1 of the Liverpool project, with phase 2 to be completed in 2016. The objective is to stimulate greater throughput at the new terminal increasing trains from this location, and ultimately using four sets of wagons to move up to 3mt of biomass per annum from Liverpool (Peel Ports) to Drax Power Station.

A major challenge to establishing this new flow to Drax was securing paths across the TransPennine rail network. Previously the majority of freight operations east-west have been residual traffic. Two years ago Drax, working with Network Rail and GBRf, identified viable paths that could support a train plan to and from the Port. GB

Railfreight has since been working closely with Network Rail and Drax to make this service a reality.

GBRf became the first rail freight operator to move biomass by rail in the UK back in 2010, as part of its contract with Drax Power.

John Smith, Managing Director of GBRf, said: "The running of the first biomass train for Drax Power from the Port of Liverpool is an important moment for GB Railfreight. Over the last two years, we have been working with Drax and the infrastructure operator to secure viable paths across the TransPennine rail network and answer the demands of one of our longest and most loyal customers.

"Today is recognition of these efforts and the innovative approach we take to customer solutions. We're looking forward to building on this relationship with Drax as we move into Phase 2 of the Liverpool project."

Graham Backhouse, Drax Head of Supply Chain & Logistics, said: "This first delivery of sustainable biomass from the Port of Liverpool is further evidence of Drax powering the Northern Powerhouse."

"Using cutting edge biomass technology we are transforming the UK's largest Power Station into one of Europe's largest generators of renewable electricity. Receiving biomass from Liverpool is another example of how we provide the UK with sustainable, reliable and affordable energy."

DB Schenker Rail UK announces three new contract wins

DB Schenker Rail UK has announced a triple win after securing contracts with construction companies United Asphalt, Brett Aggregates and J Clubb. Each contract will see the UK's leading rail freight operator transport aggregates across the UK, providing a more eco-friendly alternative to road transportation. The deals will save 2 million road miles each year. DB Schenker Rail UK has secured a five year contract with United Asphalt to transport hard stone aggregate from Ipswich Docks and Avonmouth Docks to Theale, Berkshire and is the first time that imported hard stone has been moved from Ipswich Docks by rail.

Three services will be completed each week, carrying approximately 1,300 tonnes of aggregate per train. The first service ran from Avonmouth Docks on 12 October carrying specialist skid resistant aggregates imported from Belfast. United Asphalt, an independent asphalt manufacturing business producing quality assured asphalt, macadam and specialist surfacing products, is purchasing rail services directly for the first time. The introduction of DB Schenker's rail freight service means that up to 135 lorry loads will be

removed from the roads each week, leading to a significant reduction in CO2 emissions.

David Fletcher, Head of Construction Sales at DB Schenker Rail UK, said: "This is the first time that United Asphalt has directly purchased rail transport and we are delighted they have selected DBSR UK to provide these services. "As the leading supplier of rail services to the construction sector this is an exciting project and we are already working with United Asphalt on additional rail services."

Brett Aggregates, one of the largest independent producers of sand and gravel in the UK, has also chosen DB Schenker Rail UK's services, in a 10 year contract. The new deal will see the rail freight operator moving aggregates, for use in the production of concrete, from Cliffe, Kent to Brett Aggregates' new railhead in Neasden, North London. Brett Aggregates has been working with DB Schenker Rail UK for around three years to open this facility, which will allow the delivery of aggregates into central London without using road transport. The new service, which commenced 14 October, will run at a rate of two trains per week carrying approximately 1,300 tonnes of material per train, the equivalent of around 90 lorry loads. Brett Aggregates provides a wide range of traditional and recycled products from 32 quarry sites and wharves in London, the South East and East of England.

"Our partnership with Brett Aggregates provides an efficient and eco-friendly way to transport material into the capital" said David Fletcher. "We have been successfully operating the Ipswich to Watford traffic for Brett Aggregates since 2013 and the development of services to the new Neasden railhead further strengthens our relationship with them."

Adding to their success DB Schenker Rail UK has also started a contract with J Clubb this month, transporting ash from West Burton Power Station, Nottinghamshire to East Peckham, Kent. The new six year deal will see DB Schenker Rail UK operate two trains per week, transporting around 1,200 tonnes of product per train. The ash is used in the production of concrete blocks, an eco-alternative to tipping the ash for waste. The initiation of this contract follows the work by J Clubb to reinstate the former East Peckham railhead to handle such traffic. The first service arrived at the railhead on 14 October and was the first regular rail traffic through the site for at least 10 years.

Jon Clarke, Account Manager at DB Schenker Rail UK, said: "We are very pleased to be working in partnership with J Clubb to deliver product to the newly reinstated East Peckham Railhead site. "The closure of coal fired power stations in Kent has meant alternative sources needed to be identified. Using rail freight to transport the aggregates removes around 170 lorry loads from road transport each week."

Celebrating 50 years of Freightliner

On November 12, Freightliner, the U.K.'s largest rail maritime intermodal operator, celebrates 50 years since the running of its first train which ran from London to Glasgow. Customers, industry representatives and colleagues will mark the anniversary with an event at the National Rail Museum in York, where the Secretary of State for Transport, Rt. Hon. Patrick McLoughlin MP, will deliver a key note speech.

Since its creation in 1965 as the container arm of British Rail, the nationalized rail operator responsible for most passenger and freight railway services in Great Britain, Freightliner has gone from strength to strength.

In 1996, after three decades as part of both British Rail and the National Freight Corporation, Freightliner was sold through a management buyout (with the backing of 3i and Electra). This move was part of the wider privatisation of the U.K. rail infrastructure and operations.

Since privatisation, Freightliner has seen strong growth and has diversified beyond deep-sea intermodal traffic with the creation of several subsidiaries, including Freightliner Heavy Haul, Logico, Freightliner Maintenance, Freightliner Poland and Freightliner Australia. The Group also completed the acquisition of ERS Railways in the Netherlands and, most recently, expanded into the Middle East in the form of a U.K. consortium.

Earlier this year, Freightliner was acquired by Genesee & Wyoming, a U.S.-based owner of short line and regional freight railroads serving more than 2,000 customers over 15,000 miles of track in five countries.

Jack Hellmann, President and Chief Executive Officer of Genesee & Wyoming, said: "Freightliner is an excellent strategic fit for G&W, adding a world-class intermodal and heavy haul franchise as the foundation of G&W's U.K./Europe business and unlocking more opportunities in Australia." "Working with Freightliner's talented management team, who have a long track record of success in building Freightliner over the past two decades, we expect to grow the business even more and also unlock a range of investment opportunities worldwide."

Freightliner Chief Executive Russell Mears said: "Our 50 year anniversary is a significant achievement. Freightliner is a respected, premium rail brand and our staff, some of whom have been with the company for over 40 years, are proud to be part of a successful organisation with such a rich history."

Abellio Greater Anglia introduces round-the-clock Twitter service

Rail passengers in East Anglia can now benefit from round-the-clock online information as Abellio Greater Anglia extends the hours of its Twitter service.

From Sunday 8 November, the service will be available 24 hours a day, seven days a week. The operator has consistently expanded the hours of operation since it started operating the franchise in 2012 and more than 60,000 people now follow its @greateranglia and @Stansted_Exp accounts.

The train operator's dedicated social media team will continue to respond to queries and comments from 0630-2200 Monday to Friday, from 1000 - 1900 on Saturdays and from 1000 - 1800 on Sundays. Outside these hours, a partnership with National Rail Enquiries means that passengers will be able to

tweet the operator at all hours of the day and night.

The Twitter service is very popular with passengers and the Abellio Greater Anglia team regularly receives praise from customers for their helpful and responsive approach. It is one of five train operators to offer a round-the-clock Twitter service.

Andrew Goodrum, Customer Services Director for Abellio Greater Anglia, said: "We are very pleased to extend the operating hours of our Twitter service. Twitter is one of the many ways in which we communicate with our customers and continues to provide live information to thousands of people every day."

The DB management train with DVT No. 82146 approaches Pleasington on October 6th, with Class 67 029 on the rear, working 1Z06 from Carlisle - Rugby.

Rattling a thing of the past with Virgin Trains' New Crockery

Virgin Trains has unveiled a new lightweight tray as part of a new crockery launch that will put an end to the chorus of onboard rattling crockery and cutlery. The tray is part of a five-piece dining ware set that includes an artisan sugar bowl created by a potter on the West Coast Mainline.

This is the first time since 2008 that Virgin Trains has updated its First Class crockery, which will be onboard and in lounges for First Class customers in early November.

It follows extensive research amongst customers and frontline staff which identified rattling cups and cutlery as a common gripe. The new crockery will showcase Virgin Trains' recently launched autumn menu, which features regionally sourced food from suppliers and producers on the train operator's West Coast route.

Amanda Smit, Head of Catering at Virgin Trains, said: "At Virgin Trains, we make it a priority to provide our customers with the very best and are committed to improving our services, right down to the teaspoon. We're also committed to supporting the many local businesses that operate along our route. With this crockery upgrade and our new menu, we're right on track in our quest to achieve both goals."

Eureka! Museum Train Gets A Refresh

Donated by Northern Rail, a Serco and Abellio joint venture, and first opened in 2010, the Eureka! train at Halifax's National Children's Museum is used as an interesting and unusual lunch area for visiting school children and families.

The train had been well used over the past five years and the time had come to give it a bit of a spruce up, so over a three-week period Northern, in partnership with supplier Aura Graphics, did battle with the autumn weather to do just that.

The works, costing £16,000, include a new brighter, more weather-resistant livery and the train now benefits from an upgrade to the roof which means it should last well into the future, and require less maintenance.

All the work was done on-site and the museum managed to continue to operate as normal while the work was ongoing, even though the train was out of action for a while.

Tudor Gwynn, Operation and Projects Director at Eureka! said: "The train has been a valuable resource for the museum and provides a great space for families and school children to use to relax, enjoy their lunch and learn a bit about rail travel and safety. We're really grateful to the whole team that worked on the project and we're delighted to have it back in action and looking better than ever."

Stuart Draper, Northern's Director of Engineering, agreed: "Northern is really proud to have been able to support the museum in this way. The upgrades we've made will mean the train is available for the children to use for at least another five years, and hopefully even longer!"

Allerton depot opens to electric trains after £23m makeover

Allerton Train Maintenance Depot is ready to service Northern Rail’s fleet of Northern Electrics trains after a £23m upgrade by Network Rail. The fleet of 20 electric trains, which are due to be fully deployed by December 2015, will provide 6.7m additional seats a year to routes between Liverpool, Manchester, Wigan, Preston and Warrington for Northern Rail’s customers.

Located near to Liverpool South Parkway on the busy Manchester to Liverpool line, Network Rail acquired the depot in 2011, transforming it from its near derelict state to a cutting edge maintenance facility, servicing Northern Rail’s fleet of diesel trains. As part of its North West Electrification Programme, Network Rail, supported by lead contractor Buckingham, then committed to a further package of improvements at Allerton, re-electrifying the depot (after de-electrification in 2009) to accommodate Northern’s electric trains. Transport Minister Andrew Jones said: “Our investment in infrastructure is transforming the railways in the North, giving passengers better journeys and helping to build the Northern Powerhouse. “The re-electrified depot at Allerton will help us to deliver more electric trains on the Northern Rail network, expanding the fleet in the north west, and crucially, provide additional seats and capacity for customers.”

Martin Frobisher, route managing director for Network Rail, said: “The electrification of Allerton depot is an important part of our Railway Upgrade Plan with Network Rail investing over £1bn to improve rail services across the north. By electrifying routes between key towns and cities, passengers will benefit from bigger, better

and more environmentally friendly trains. The improvements at Allerton mean these trains can now be housed and maintained to help deliver these benefits.”

Welcoming the re-electrification of Allerton train maintenance depot, Northern Rail’s managing director Alex Hynes said: “Creating a Northern Powerhouse of jobs, investment and prosperity is a key objective of the Government’s long term economic plan. Northern is proud to be playing a key part in bringing this to life; by introducing 20 Northern Electrics trains we are improving connectivity across the North and providing much needed extra capacity on some of the UK’s busiest routes.

“Network Rail’s support through the improvement and extension of Allerton depot is vital. It means that we are not only equipped to maintain the electric trains we already have in service, but we are able to introduce even more in the coming months.”

Work on the depot started in 2014 and the improvements have been delivered in three phases, with phases 1 and 2 now complete and including: Electrification and extension of the existing train shed to accommodate the new, longer electrified trains including supporting trackworks; Installation of new electrification equipment in support of the above; New depot protection system to safeguard staff ; Modernisation/expansion of the existing maintenance ‘pit’ to provide improved access; New walkways and lighting; New sanding equipment to help address track adhesion problems (including leaves and ice on the line); Installation of over a mile of new/re-conditioned track Further improvements (phase 3) are also underway to improve the depot’s capacity, enabling it to stable up to 100 trains. The improvements include modifications to the Hunts Cross end of the depot, with works scheduled for completion by the end of the year.

FIRST MINISTER LAUNCHES NEW VIRGIN FLYING SCOTSMAN TRAIN

On October 28th, Scotland’s First Minister, Nicola Sturgeon, unveiled Virgin’s new ‘Flying Scotsman’ train, celebrating one of the most famous names in railway history. Virgin Trains, which runs a four-hour ‘Flying Scotsman’ express service from Edinburgh to London, has re-liveried a locomotive to promote rail travel to and from Scotland.

This marks a major milestone in the ‘Virginising’ of its fleet of trains into a distinctive Virgin red, as it continues to attract more people to travel on its trains, particularly between the UK’s two capital cities. The unveiling took place at Edinburgh Waverley station on the same day that Virgin Trains announced a £16m contract to refurbish engines for its High Speed Trains, which are serviced and maintained at its Edinburgh depot.

Nicola Sturgeon, First Minister of Scotland, said: “For over 150 years the Flying Scotsman service has connected Edinburgh and London by the historic East Coast rail route. It is wonderful to see the name of the Flying Scotsman train kept alive on the route with a new, contemporary design. I am also delighted that the refurbishment of Virgin’s diesel engines will draw on the local skills and talents of the Craightinny workforce.”

David Horne, Managing Director at Virgin Trains on the east coast route, said: “We are thrilled to continue the legendary name of the Flying Scotsman. Flying Scotsman trains brought style to the railways for many years. Our new train is a design twist on the legendary Flying Scotsman, recreating the glamour of rail travel for the 21st century, using our distinctive Virgin brand and style. The re-livery of our fleet in Virgin red is now almost complete, but we felt we just had to create a unique look to promote our Flying Scotsman and travel to and from Scotland. We look forward to welcoming customers on-board and providing them with a great Virgin customer experience.”

Virgin Trains will also launch a new service from Stirling to London on 14 December 2015, and from May 2016, four additional return services will be launched between Edinburgh and London. The company has signed a £16m deal with engine manufacturer MTU to refurbish all 35 diesel engines for its fleet of High Speed Trains. The engines will be fitted at its Craightinny depot, in Edinburgh over the next two years.

David Horne added: “This new engine replacement programme will ensure the continued strong performance of Virgin Trains’ High Speed Train fleet until the introduction of new Super Express Trains from 2018. We are pleased that the work to install the engines, which will also be in Virgin red, will take place in Edinburgh. We continue to play a key role in the economy of the Capital and Scotland as a whole, where more than 700 of our workforce are based.”

Work to reinstate quarry link reaches major milestone

A project to reconnect two quarries with the main Settle to Carlisle railway at Horton in Ribblesdale reached a major milestone in late October when the new line was connected to the existing network.

Funded by Tarmac in support of its Arcow and Dry Rigg quarries, the £5million project will help remove more than 16,000 lorry journeys from the local road network each year and follows close liaison with the Yorkshire Dales National Park Authority, Craven District Council, local parish councils and residents to look at alternative ways of transporting materials.

Delivered by Network Rail and its partners Babcock and Story Contracting, the work, which started this summer, includes:

- Significant earth removal as well as the construction of a new supporting railway embankment
- Opening up the connection between both quarries and the main railway line
- Track and signalling work to connect the new section of railway to the main railway line including supporting signalling work at Blea Moor, Settle Junction and Arcow

Ross Halley, Tarmac's regional estates manager North and Scotland, said: "The opening will remove thousands of vehicle movements from the local highway network, increase connectivity to Tarmac's sites and help secure the line for future generations. This project would not have been possible without commitment from Network Rail and our local stakeholders, including the Yorkshire Dales National Park Authority and we are delighted that this project is nearing completion".

Joelle Calderelli, Network Rail's scheme project manager, said: "On completion, this new link will have a major, positive impact upon the local road network, helping remove thousands of lorry journeys from the Yorkshire Dales National Park. As part of our Railway Upgrade Plan we are committed to working with all parties to develop the railway to support industry and the wider economy."

Once this work has been completed, a new footbridge will be installed to cross the new rail connection, aligned to the existing pedestrian route adjacent to the quarry. The new rail link is scheduled to open to traffic in late 2015/early 2016.

The rail connection was originally removed from use in the 1960s.

Loco Fleet List 2015

This publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

Contents

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric Locomotives
- Eurotunnel Locomotives
- Unclassified & Prototype Locos
- Locomotive Names

Loco Fleet List 2015 is available via mail order for just £7.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or by using Paypal when visiting the Milz Publications website.

Web: www.milzpublications.co.uk Email: lee@milzpublications.co.uk

Arrival of new South West Trains fleet moves closer as Siemens starts to build new trains

The plan to introduce a £210 million fleet of brand new trains for South West Trains (SWT) passengers has passed an important milestone. Construction of the first Siemens-built Class 707 Desiro City trains is now underway with the main body of the train created and assembled. This marks the first stage of development for the new trains which will run between London Waterloo and Windsor, improving passenger facilities and increasing space for passengers on some of the busiest services in the country. All design work for the £210 million fleet of 30 five-carriage trains has been finished and the first unit is expected to be built by the end of February 2016. The first new train will then begin testing in May 2016 before being delivered by leasing company Angel Trains to SWT Wimbledon depot in time to start passenger service in June 2017. During this time, all units will be extensively tested to ensure reliability and provide SWT staff the opportunity to train on the new trains and become familiar with the new systems before they enter passenger service. It is expected that all of the new fleet will be delivered by the end of 2017.

The new Desiro City trains will significantly increase space for passengers and improve the on-board facilities. They feature state-of-the-art technology, are lighter than existing fleets and are much more energy efficient. The trains also feature a light and airy, air-conditioned environment, better on-board train information systems and free passenger WiFi. They also have 'open gangways' meaning passengers can both see through and walk the length of the train much more easily. The new trains will boost capacity for SWT passengers, allowing more than 18,000 extra passengers to travel in and out of London Waterloo during the

busiest times of the day. When they are introduced, it will allow other existing SWT trains to be moved to other parts of the network – increasing capacity on other key routes.

Commenting on progress, Steve Scrimshaw, Managing Director, Rail Systems at Siemens, said: "The start of manufacture for a new fleet of trains is always an exciting milestone. It gives a sense of real progress to a project that up until now has lived on paper, technical drawings and computer. We are now turning the designs into reality and drawing closer to the next key milestone, the first complete train running around our test track before the ultimate goal, delivering new, spacious and comfortable trains that really improve the passenger experience."

Christian Roth, Engineering Director for South West Trains, added: The introduction of the brand new Class 707 Desiro City trains is an absolutely crucial part of our plans to provide the biggest increase in capacity on this network for decades. When delivered, these new trains will provide a major increase in spaces for passengers as well as much improved facilities, including better accessibility and free WiFi. We are delighted manufacturing is now underway and look forward to welcoming the first units to the UK."

Malcolm Brown, Chief Executive Officer for Angel Trains, said: With significant population growth it is essential that London's transport network can adapt to meet the capital's current and future needs. Angel Trains is committed to investment in London's rail network and we are delighted to be working with Siemens and Stagecoach South Western Trains to procure and lease this new fleet of new Class 707s which will bring much needed additional capacity and an improved passenger experience to the system from next year."

First wires go up on EGIP

The Edinburgh Glasgow Improvement Programme (EGIP) reached another key milestone on October 27th when the first 1.5km overhead power cables were run out on the main Edinburgh-Glasgow route.

Over 250km of overhead power equipment (OLE) will be installed in the coming months as part of the £742m Scottish Government-funded project.

The wiring work is currently being delivered using conventional mobile elevated platform methods, ahead of the arrival of a new wiring train in January.

Running in tandem with the wiring works, engineers are also working to complete the last of over 60 clearance projects required by EGIP and to deliver the 2366 stanchions and masts needed to support the OLE – over 320 of which have already been erected. Due to electrify the main Glasgow Queen Street - Edinburgh Waverley via Falkirk High route by December 2016, EGIP will deliver faster, longer and greener trains for customers.

Rodger Querns, EGIP programme director, said: "Installing the first overhead power lines is a significant step on the way to completing this vital project and we remain on course to deliver faster, greener services for passengers by the end of 2016 as planned."

Did you Know - Ken Mumford

Railway Accident - Cornish luck

In Cornwall the pluck and quick decision of a North-bound Mail train Driver Westlake averted a version of the 1867 Abergele disaster.

On a single line, with a very severe gradient, a china clay train (driven by another engine-man) was working its way along in order to shunt into a siding, to allow the North-bound Mail to pass. The weight of the fully laden clay train proved too much for its brakes, and the engine-driver realised that his trucks were running away with the locomotive. He knew what would happen, for the Mail was due and his train was running full speed towards it. The clay train dashed through St. Austell station towards the oncoming Mail, the poor clay train driver making signs that his train was out of control. Nothing could be done at that station except wait for the almost certain impact of two heavy trains, and the terrible disaster that this collision must mean.

By great fortune the Mail train driver, when within a mile of St. Austell station, saw the runaway train sweeping down towards him, guessed the cause, and, like the brave, quick-witted man he was, stuck to his locomotive.

Putting on the brakes, he stopped his train, reversed his engine, and began a backward journey.

Even now, the oncoming clay train was gaining upon the Mail, and it looked as if most passengers could hope for was a terrible smash just a little less severe than if they had met in an end-on collision.

The feelings of the gallant Mail train Driver Westlake can be better imagined than described, for he now saw the clay train gaining speed upon him before his own locomotive could pick up speed from its unexpected emergency stop. He might have jumped clear, and so have ensured his own safety, leaving the unsuspecting passengers to their fate.

But the real heroism of plucky Driver Westlake had its reward - the incline ended, and gradually the Mail train drew away from the clay train. Not too soon, however, for only twenty yards separated the two locomotives when the Mail train passed to safety.

Railway Accident - Brutus gets Cannoned

A broad gauge locomotive on the South Devon Railway was standing quietly in Plympton station when the Down Night Mail ran beyond its usual stopping place and cannoned the sleeping "Brutus."

This shock opened its regulator, and off it went without anyone on the footplate, running at full speed towards Plymouth.

Here it came to an inglorious stop at the buffers at the end of the line.

"Brutus" carried them away in his charge, tore up the platform like a motor tractor on the land, and came to rest in the clock-room, which the burly locomotive completely wrecked; yet "Brutus" was practically undamaged!

Rail safety warning as crossing users seen taking selfies and lying on the track in Derbyshire

A stark warning has been issued after CCTV captured eight incidents of dangerous behaviour in a single day on a rural railway crossing in Derbyshire. Video footage at Matlock Bath station caught adults and children taking selfies, talking on the phone while walking along the line and even sitting down to pose for pictures on the tracks. One group of up to ten people, including a toddler, spent over eight minutes on the railway taking photographs and chatting. Network Rail is now urging crossing users to pay more respect to the railway and to use crossings safely before a serious incident takes place.

Martin Brown, operations risk advisor at Network Rail, said: “Level crossings in rural, picturesque settings such as Matlock may look like good opportunities for a photo but the railway is not a playground. Trains can come from either direction at any time and being distracted by chatting, texting or taking photographs while using the crossing significantly increases the risk of an incident.”

Inspector Eddie Carlin from British Transport Police said, “The photos captured are extremely worrying. We are really concerned someone is going to get seriously injured or killed at the crossing. Trespassing on the railway is extremely dangerous and can have tragic

consequences for those involved. I have had to tell devastated families that their loved ones are not coming home due to incidents such as this and it's heartbreaking. The railway is a dangerous environment. Trains travel at speed and can be silent and if people are trespassing on the tracks and are distracted taking photos, selfies or texting they really are putting themselves in danger, no photo or text is worth risking your life. We have increased patrols in the area and are keen to speak to the people pictured to reinforce our concerns about their reckless and dangerous behaviour. If you recognise them please contact us on 0800 405040 or text 61016.”

Matlock Bath has a foot crossing with a Stop, Look and Listen sign at the crossing gate. It sees over 30 trains per day and is used by over 500 pedestrians and cyclists.

Virgin Trains named Best UK Domestic Train Service at Business Traveller Awards 2015

Virgin Trains has been voted the Best UK Domestic Train Service at the Business Traveller Awards 2015. Regarded as the market's benchmark for excellence, the Business Traveller Awards recognise the best service providers in business travel.

Readers of Business Traveller voted Virgin Trains top for Domestic Train Service in the UK ahead of First Great Western and Heathrow Express. For nearly a decade, Virgin Trains has been recognised by business travellers for going the extra mile to make customers' journeys enjoyable and stress-free.

Amanda Robinson, Head of Sales at Virgin Trains, said: “At Virgin Trains, we really value our business customers and are committed to ensuring that they can arrive ready to tackle the challenges of their working day. We're always striving to offer our business travellers the best experience, so we're delighted to be recognised as the best domestic rail service provider in the UK and are already looking forward to the challenge of building on this achievement.”

The A1 Steam Locomotive Trust
New Steam for the Main Line

The Red Rose Express recreated for Valentines Day

**London Paddington to Worcester and return on Sunday 14th
February 2016 with famous new steam locomotive 60163 Tornado**

The A1 Steam Locomotive Trust, the registered charity behind famous new steam locomotive 60163 Tornado, is delighted to announce the recreation of 'The Red Rose' express. This special Valentine's Day main line steam railtour will run from London Paddington to Worcester and back by two different routes, picking up passengers at both Slough and Reading. The original 'Red Rose' was specially named in celebration of the Festival of Britain and ran from London Euston to Liverpool and return from 1951 to 1966. This unique railtour will feature new build steam locomotive No. 60163 Tornado, which was completed in 2008, hauling historic carriages in carmine and cream livery with those passengers in First Class Dining receiving a traditional silver service throughout the journey. Highlights of the day will be a fast run from Paddington to Bristol along the Great Western Main Line and the ascent of Sapperton Bank on return. Passengers will have around three hours in the City of Worcester, with the option of a visit to the Elgar Birthplace Museum. With No. 60163 Tornado at the head of 'The Red Rose' express, we depart from London Paddington at a civilised 09:25, calling at Slough (which is convenient for the M25) and at Reading. Our route takes us through the railway town of Swindon to Bristol East Loop where we pause to take water. We then traverse the Rhubarb Loop and head north, via Bristol Parkway and Yate where we join the former Midland Railway line through Charfield. We avoid Gloucester and at Abbotswood Junction we diverge left to arrive at Worcester Shrub Hill station at around 13:30. From the station it is about a ten minute walk into the city centre with its fine medieval buildings along with some lovely old pubs and an excellent shopping centre. The Cathedral, founded in AD680, has been described as possibly the most interesting of all England's cathedrals and towers above the peaceful River Severn. Optionally, a ten minute coach journey from the station takes us to The Elgar Birthplace Museum which offers a fascinating insight into the life and music of Sir Edward Elgar, whose masterpieces include the Dream of Gerontius, the Enigma Variations, and appropriately The Valentine. The museum comprises two buildings, the modern Elgar Centre and the atmospheric Birthplace Cottage. Together they reveal the great man behind the music. Our return route, still with No. 60163 Tornado at the head of the train, is via Stroud and Sapperton to Swindon and after a watering stop at Wantage Road we duly arrive back at Reading, Slough and London Paddington. The train will comprise First Class Dining and First Class Non-Dining carriages, ideal for those wishing to celebrate Valentine's Day in style. For those more interested in main line steam performance, there will be Standard Class accommodation available also. Tornado will be hauling a limited number of main line railtours during 2016, with all profits going towards the upkeep of this magnificent locomotive. Consequently, space on this train is likely to be at a premium and so an early reservation is recommended. Tickets for the 'The Red Rose' are priced at Standard Class (£99.00), First Class Non-Dining (£139.00) and First Class Dining (£225.00) with all profits going to The A1 Steam Locomotive Trust. Guaranteed 'tables for two' in First Class Non-Dining and First Class Dining are available for a supplement of £25.00 per person. The optional visit to the Elgar Birthplace Museum is priced at £10.00 per person including admission and coach transfers. Terms and conditions are available on request. Bookings by debit or credit card are via our ticket agents UK Railtours.

Recently returned from heavy overhaul, Quarry Hunslet 0-4-0ST ‘Irish Mail’ works No. 823 of 1903 hauls a train of bogie freight wagons. [Ken Abram](#)

SANTA TICKETS SELLING FAST FIRST TRAIN NOW SOLD OUT

The traditional combination of steam & Santa still has plenty of pulling power!

Festive trains on Leicestershire’s award winning Great Central Railway where families can meet Father Christmas are selling fast. In fact the first train has now sold out completely - two months before it is due to depart!

“Our Santa Specials have always been popular,” said GCR Marketing Manager Kate Tilley, “and last year was a record breaker in terms of the number of visitors. “For children wishing to meet the man in the red coat and Mrs Claus, there’s nothing quite as magical as our Santa steam trains”

Santa Specials and Santa Deluxe trains operate from the last weekend in November through to Christmas Eve with children receiving presents on the train which is hauled by a steam engine. Advance booking is essential.

You can arrange your ticket online at www.gcrailway.co.uk

BIFFA AWARD RECOGNISE WORK AT QUORN & WOODHOUSE

THE DAVID CLARKE RAILWAY TRUST SCOOPS AWARD FOR STATION RESTORATION PROJECT AT THE GREAT CENTRAL RAILWAY

The David Clarke Railway Trust team are celebrating after a key restoration project picked up a national award. Biffa Award funded the renovation and interpretation of the station yard at Quorn and Woodhouse station, and has now declared it the top 'Cultural Facility' project. The Coventry Transport museum was the setting for this year's Biffa Award ceremony. The Biffa Award team were joined by nearly 80 people to help celebrate the incredible work projects across the country have done in 'Building communities. Transforming lives.' More than 240 eligible projects were whittled down to a shortlist of just 20 across the five categories: Community Buildings, Recreation, Small Grants, Cultural Facilities and Rebuilding Biodiversity, as well as an overall winner. The restoration project at the Great Central Railway's Quorn & Woodhouse Station won the Cultural Facilities prize. Thanks to the grant of £46,416 from Biffa Award, Quorn & Woodhouse Goods Yard has been transformed to include features which recreate some of the facilities which would have been found in the days when the GCR was a Main Railway running to London Marylebone. The project aimed to enhance the visitor experience, particularly for the younger generations, many of whom would never have seen a working goods yard in a typical rural railway station. A timber goods platform has been built which incorporates a cattle dock, where animals would have been kept prior to transportation and coal staithes erected to show how coal would have been stored ready to be loaded onto the tenders behind the locomotives. The station stairs and roof have been authentically repaired and refurbished to address structural problems. A corrugated tin clad building (The Tin Shed) which dates from the opening of the railway in 1899 has been rescued from its dilapidated state, re-clad and refurbished to create a community meeting room.

The project was managed by two of the Great Central Railway's long serving volunteers, Brian Screatton and Tom Chaplin who attended the award ceremony at Coventry Transport Museum on Thursday 1st October. Bill Ford, Chairman of the David Clarke Railway Trust said, "We are delighted with this award which is a fitting tribute to the hard work of everyone who took part in the project. From the grant application, to the design, to managing the contractors who undertook the work it has been a real team effort. As we continue to develop the railway, unlocking the secrets of how and why the railways were built and how they served communities is really important and we are thrilled Biffa Award have funded and now recognised the work." The Great Central Railway is planning to build a new heritage railway museum at its Leicester North terminus and was recently granted a first round pass by the Heritage Lottery Fund. The improved facilities at Quorn and Woodhouse station yard will contribute to the concept of a working museum; whereby the railway and its out stations will demonstrate the everyday activities of a typical Victorian Railway

Ex WD Austerity 2-8-0 No. 90733 climbs out of Oakworth on October 9th hauling the morning freight run. It was weathered and renumbered as No. 90711 which had local connections, being a Bradford Low Moor loco. [Ken Abram](#)
